ITEM 1

Town of Kittery
Planning Board Meeting
April 12, 2018

459 U.S. Route One – Mixed-use development – Site and Subdivision Preliminary Plan Review
Hold a public hearing, approve or deny application. Owner, DSS Land Holdings, LLC, and applicant, Michael Brigham of Landmark Hill, LLC, requests consideration of a mixed-use development consisting of 26 elderly housing units (reduced from 28), two buildings with retail/commercial units and 16 apartments (reduced from 22 apartments) and one additional commercial/clubhouse building. The six mixed-use commercial/retail/residential buildings shown on previous plans were removed. All are located at 459 U.S. Route 1 (Tax Map 60 Lot 24) in the Mixed Use (MU), Rural-Residential (R-RL) and Shoreland Overlay Zone. (OZ-SL) Agent is Ken Wood, Attar Engineering.

PROJECT TRACKING

REQ'D	ACTION	COMMENTS	STATUS
YES	Sketch Plan	Scheduled for September 14, 2017, approved on October 12, 2017	APPROVED
NO	Site Visit	Held April 3, 2018 at 11:00 am	HELD
YES	Preliminary Plan Review Completeness/Acceptance	February 8, 2018	APPROVED
YES	Public Hearing	Scheduled for April 12, 2018	PENDING
YES	Preliminary Plan Approval	Possible for April 12, 2018	PENDING
YES	Final Plan Review and Decision	TBD	TBD
Applicant: Prior to the signing of the approved Plan any **Conditions of Approval related to the Findings of Fact along with waivers and variances (by the BOA) must be placed on the Final Plan and, when applicable, recorded at the York County Registry of Deeds. PLACE THE MAP AND LOT NUMBER IN 1/4" HIGH LETTERS AT LOWER RIGHT BORDER OF ALL PLAN SHEETS.** As per Section 16.4.4.13 - Grading/Construction Final Plan Required. - Grading or construction of roads, grading of land or lots, or construction of buildings is prohibited until the original copy of the approved final plan endorsed has been duly recorded in the York County registry of deeds when applicable.			

Background

This is a preliminary plan review for a proposed mixed-use development located at 459 State Route 1 in the Mixed Use (MU) Zone, previously approved as the Sowerby mixed use in 2008. Since then the six residential lots have been conveyed and developed with single-family homes. As part of this development, a sewer force main has been installed connecting the lots to public sewer in Route 1 via an easement that burdens this property. There are also wetlands on the property.

The applicant is proposing 26 elderly single-family housing units, two buildings with first-floor office/retail and 16 second-floor apartment residential uses and one building split between commercial use and a club house. Office and/or retail on first floors and residential uses on the upper floors of a mixed-use building, the proposed elderly housing as well as single retail uses of less than 50,000 square feet are all permitted in the Mixed Use (MU) Zone. The elderly housing is a Special Exception Use.

The Board approved the sketch plan on October 12, 2017 and reviewed the preliminary plan for completeness on January 11, 2018. The Board found the application complete on February 8, 2018. On March 22, 2018 the Board set a date for a site walk (an earlier site walk had to be postponed) and the public hearing. A site walk was held on April 3, 2018. Comments on the revised preliminary plan and submission are below.

Staff Review

February 8, 2018 meeting: the Applicant included narrative describing how the elderly single-family housing special exception use meets the requirements of 16.3.2.13.G as requested by the Board. At this meeting the Board discussed moving two of the stormwater ponds out of the 100-foot setback and wanted to see the net residential calculations include travel ways and parking areas. The Board found the application complete at this meeting.

March 22, 2018 meeting: the Applicant's agent briefed the Board on the plan revisions the Board could expect to see on the plans submitted for this meeting. These revisions are primarily the result of the net residential acreage calculations including travel ways and parking areas being applied.

Special Considerations: The applicant is requesting that the Board consider granting a 50-foot extension of the MU Zone which would allow the entire parcel to be considered under the MU Zone. The applicant addressed the 7 conditions found in 16.7.2.5 that the Board must consider in order to grant this request in the original submission letter. The Board also has the option of requesting additional information or a study from the applicant when considering this request. Staff recommends that the Board request a no-cut buffer around the wetlands of special significance.

CMA Review: CMA's review is included in the packet.

Review Considerations

1. The proposed development consists of two primary types of buildings: two mixed-use buildings with first floor commercial space and parking and 16 dwelling unit apartments on the upper floors and the 26 single-family elderly housing units along a new street. Maintenance of the stormwater management systems must be assignable to an entity or an owner. It appears that two associations will be created: a condominium association and a development association.
2. The net residential calculations shown in General Note 6 on Sheet 1 now subtract the amount of travel way and parking proposed and the sewer easement per 16.7.8.2.
    a. Plan Sheet 1.1's final net residential density statement appears incorrect. Assuming the net residential area is correct after subtracting the wetlands, hydric soils, travel ways, sewer easement and parking, the Net Residential Density statement should read:

        437,714.7 – (26 x 10,000) – (16 x 10,000) = 420,000 as the 26 elderly single-family homes each require 10,000 sf of land area as do each of the 16 apartments.
3. From previous staff notes*: the preliminary plan design should, as it continues to integrate the elderly housing within the mixed-use development, provide for opportunities for common space to congregate and enjoy some outdoor space adjacent to some staple facilities that may cater to the over 55 community as well as to the other residents on site.*

    In this preliminary plan submission, the applicant has provided a building with a first-floor club house, while the second floor will be commercial. There are trails shown in the open space and a passive recreation area which includes part of the sewer easement. See Plan Sheet 1.2.

    a. One part of the trail is shown moving off the subject property to the north onto another parcel. Is this an existing trail?

    The Applicant submitted a narrative for the February 11, 2018 meeting as requested by the Board to demonstrate how the proposed elderly single-family housing meets 16.3.2.13.G.
4. Wetlands on-site to the north and east are associated with an existing natural pond to the north which qualifies them per Article 16.9.3.1.B as being wetlands of special significance (WoSS). The site is also within the MS-4 area. Kittery's wetland regulations are stricter than the State's.

The stormwater ponds associated with the WoSS have been moved outside the 100-foot buffer for the most part (see a. below). The remaining stormwater ponds are located at least 25 feet from the wetlands to the west which are not WoSS. Their locations have been reviewed by DEP although a permit may not have been issued yet. Staff has spoken with the DEP staff person who is doing the permitting for this project and is satisfied with the stormwater ponds' location.

a. Some grading of stormwater pond #40 and #10 will be within the 100-foot setback for the WoSS. Is the long "tail" of pond #40 only grading? Similarly pond #20 has a long narrow "tail".

b. A portion of the parking area for the commercial/clubhouse building labeled C1 is within the 100-foot setback for the WoSS. Can this parking area be redesigned to stay within the setbacks or could one of the other parking areas add one or two spaces so that this parking area could be downsized to stay within the WoSS setbacks? See Note 10 also.

5. As proposed, the elderly single-family units are 3 BR 2,800 sf. The apartments are 2 BR with a single 3 BR unit on the top floor of each building. There is 4,000 sf of commercial space in each of the two buildings labeled A1 and A2. The C1 building has 2,000 sf of commercial space on the second floor with a 2,000 sf clubhouse on the first floor.

6. The example rendering of the proposed mixed-use buildings seem to show residential-only buildings.

7. All buildings will be sprinkled.

8. From previous plan notes*: A minimum of one street tree must be planted for each 25 feet of street frontage and 10 shrubs or flowering perennials per 40 feet of street frontage. Staff estimates the parcel has over 1,500 feet of frontage, therefore 60 street trees and 375 shrubs/flowering perennials are required.*

   A landscaping plan was submitted – the required 30 foot planter strip along Route 1 includes 476 plants: 66 sugar maple and red oak trees and 410 shrubs, the species of which are not named. Note 10 on Plan Sheet 1.1 gives spacing details which meet requirements. There are also red oaks and a few green ash trees scattered throughout the development, including along parking area edges and white pines along the wetland edges. This planter strip will also serve to screen the parking lot. The large parking area has 6 London plane trees in a landscaped strip that divides the parking lot and three more trees (one has a symbol for London plane but it is labeled as a red oak.) along the western side. The other parking lots have trees scattered along the edges. Section 16.8.9.4.G requires 1 tree per eight parking spaces – all parking areas meet the requirements.

9. A traffic impact report was submitted for the February 8th meeting. The traffic impact analysis submitted gave additional information including average daily traffic for the various uses. Traffic patterns are indicated on the plans and show two-way traffic through the property. Plan Sheet 1.4 shows that the ingress/egress shared with the medical office next door whose existing driveway will be abandoned will have a left turning lane for exiting onto Route 1. The updated traffic impact analysis also cited the south-bound left turn lane added to Route 1 for turning onto Lewis Road. No north-bound left turn lane was added although it was a part of the former Sowerby project's permitting in 2008 by ME DOT. Route 1 north-bound appears to have space for a left turn lane that is currently yellow striped (probably because the 2008 project was never built). The Sowerby project as approved included a hotel, convenience store, restaurants and commercial space.

   a. Lewis Road is directly opposite the proposed main entrance to the Homestead development. Will this affect traffic flow?

b. Has the ME DOT entrance permitting process begun? If so, what comments has DOT made so far? What is the process to create that the north-bound left turn lane?

10. As shown on the plans, there are 137 parking spaces. Parking requirements are broken down as follows on Plan Sheet 1.1:

    Elderly housing = 1.5 spaces/unit for 26 units = 39 (driveways)

    Apartments = 2 spaces/unit for 16 units = 32

    Retail (A1/A2) = 8,000 sf divided by 175 sf/parking space = 46

    Retail (C1) = 2,000 sf divided by 175 sf/space = 12

    Office (C1) = 2,000 sf divided by 250 sf/unit = 8

    a. The elderly single-family housing as proposed appear to be larger than 2 bedrooms (at 2,800 sf and 3 BR) which would require 2 parking spaces per dwelling unit. Staff (including the CEO) believes that the elderly housing single-family residential units may count a single-car garage and a driveway of sufficient length to accommodate a parked car without blocking sidewalks or extending beyond the curb where no sidewalks exist for the two parking spaces. Will parking be allowed on the street?

    b. The clubhouse is shown with the 8 parking spaces required per *Offices, professional and public buildings*, but two more spaces are also required because 16.8.9.4.D Off-Street Parking Standards states that "*two parking spaces for each office unit plus 1 space for each 250 feet of gross floor area*".

    c. Staff has provided a sample parking program below:

       Elderly housing = 1 single-car garage + driveway/unit for 26 units = 52 spaces

       Apartments = 2 spaces/unit for 16 units = 32 spaces

       Retail (A1/A2) = 8,000 sf divided by 175 sf/space = 46 parking spaces

       Retail (C2) = 2,000 sf divided by 175 sf/space = 12 spaces

       Office/Public building (C1) = 2,000 sf divided 250/unit + 2 spaces = 10 spaces

       This totals 100 parking spaces that would need to be provided. The single-family units would be providing parking through garages and driveways. The submission is short the two spaces mentioned earlier for an office/professional/public building.

    d. Because the clubhouse is located on-site for use by the residents on-site, the Applicant may request parking relief and/or a joint use parking plan. Use of the clubhouse would likely often occur during off-hours for the commercial uses. A parking waiver may be granted by the Planning Board (rather than the Board of Appeals) in this case because the clubhouse use is not listed in the parking table per 16.8.9.4.C. The "public building" use is the closest thing to a clubhouse. A joint use parking plan would need to be reviewed and approved by the Board of Appeals because it would involve the commercial uses which are listed specifically in the parking table.

11. Snow storage is shown – all four proposed locations are located at an acceptable distance from stormwater ponds and wetlands although Staff would prefer the snow dump near the passive recreation area be located on the other side of the street.

12. Open space requirements appear to be met per 16.3.2.13.D as is the 10% minimum use requirement per 16.3.2.13.D.4.

13. The plan sheets show the Map and Lot as Map 24, Lot 60 when it is Map 60 Lot 24. Also Sheet 1.1 shows a discrepancy in the scale in the title block and the scale on the plan itself.
14. On Plan Sheet 2.1 and perhaps others, an arrow labeled "retaining wall" does not seem to point to anything. Is there a wall proposed?
15. The Applicant states that the road will remain private – a note should be added to Plan Sheet 1.1 indicating that the roads will remain private and the Town has no responsibility for maintenance or repair of the roads, snow plowing or stormwater system maintenance.
16. It came to Staff's attention that a conservation area was created for protection of wetlands and the pond when the original 2008 Sowerby application was approved. This conservation area is noted in deeds for the Lots 2, 3 and 6 (abutting parcels to the northeast which were part of that original approval). Similarly, there should be a conservation area created 100 feet from the pond on the Homestead parcel. The conservation area will need to be shown on the plans, noted in the homeowner's association document and marked appropriately on the ground after final approval. This area is not proposed for development by the Applicant so is mostly a matter of documentation.

Recommendation
This step of preliminary plan review which includes the public hearing, provides the Board an opportunity to hear any comments from the public and to discuss the content of the plans, submission materials, staff comments and CMA's review.

1. Based on Title 16 and as shown in the review notes, the plan as submitted meets the necessary requirements except for two minor items:
    a. parking requirements for 100 parking spaces when 98 are shown which could be waived
    b. the parking area encroaching on the 100-foot WoSS setback should be moved outside the setback – this could be accomplished by seeking parking relief and/or by design changes.

The Board may wish to give the Applicant additional time to address CMA's comments and the parking issues (suggested motion below). Staff recommends that the Board give the Applicant 90 days as allowed per 16.10.5.4. Planning Board Review Schedule.

Move to continue the preliminary site and subdivision plan application dated March 28, 2018 from applicant, Michael Brigham of Landmark Hill, LLC, for 459 U.S. Route 1 (Tax Map 60 Lot 24) in the Mixed Use Zone not to exceed 90 days.

If the Board decides additional time is not needed, the Board will want to vote on whether or not to approve the preliminary plan, likely with conditions based on CMA's review and staff's recommendations. That motion is below.

Move to approve the preliminary site and subdivision plan application dated March 28, 2018 from applicant, Michael Brigham of Landmark Hill, LLC, for 459 U.S. Route 1 (Tax Map 60 Lot 24) in the Mixed Use Zone with these conditions [state the conditions].

RE: Town of Kittery, Planning Board Services
Site Plan Review Application-The Homestead 459 U.S. Route 1 (Tax Map 60, Lot 24)
CMA #591.115

Dear Ms. Connor:

CMA Engineers received the following information for Assignment #115, review of the site plan application for property at 459 U.S. Route 1:

1) "The Homestead Subdivision, U.S. Route 1 Kittery, Maine", prepared for Landmark Hill, LLC, 79 Congress Street Portsmouth, NH by Attar Engineering, Inc., 1284 State Road, Eliot, Berwick, ME 03903 dated January18, 2018 and revised March 27, 2018.
2) "459 U.S. Route 1-Kittery, Preliminary Plan Application" by Attar Engineering, Inc., 1284 State Road, Eliot, Berwick, ME 03903 dated December 18, 2017 and revised January 17, 2018.
3) "The Homestead- Mixed Use Development, U.S. Route 1, Kittery, Maine, Stormwater Management Plan" Landmark Hill Square Subdivision Additions to Multi-Use Buildings 518 U.S. Route 1 Kittery, Maine", by Attar Engineering, Inc., 1284 State Road, Eliot, Berwick, ME 03903 dated March 28, 2018.
4) "Addendum to Traffic Assessment Report, The Homestead-459 U.S. Route 1, Kittery, Maine", by Attar Engineering, Inc., 1284 State Road, Eliot, Berwick, ME 03903 dated January 16, 2018.

We have reviewed the information submitted for conformance with the Kittery Land Use and Development Code Zoning Ordinance and general engineering practices and offer the comments below that correspond directly to the Town's Ordinances. The project is in the Mixed Use, Residential-Rural and Shoreland Overlay Zone districts.

16.3.2.1 Residential-Rural (R-RL)
Several proposed uses (retail, office) are neither permitted or special exception uses in the R-RL zone, however no development is proposed in this portion of the site.

16.3.2.13 Mixed Use (MU)
B&C. All proposed uses are permitted or special exception uses.

D.2. In note 4 on Sheet 1.1, the applicant should list the provided setbacks, frontage and lot size in addition to the required zoning information. However, it appears that the applicant has met all minimum dimensional standards.

D.7.a.ii. It appears that the applicant has met the required number of streetside trees, but the Board should review if clustering them so tightly together meets the intent of the Ordinance and will permit the trees to grow to maturity.

16.3.2.17 Shoreland Overlay Zone (OZ-SL)
There is no proposed development within the overlay.

We note that the applicant has requested a 50' Mixed Use zone boundary extension under 16.7.2.5. It appears that the applicant's justification is approvable if the board desires. We note that we are unsure why the zone boundary extension is requested.

16.7 General Development Requirements
Article II. Conformity
16.7.2.5 The applicant has requested a 50' Mixed Use zone boundary extension. It appears that this request is supportable. We are not sure of the motivation for the extension.

Article VIII. Net Residential Acreage
16.7.8.2 It is not clear where the reduction from 10,000 sf to 7,500 sf minimum land area per dwelling unit for the 16 apartment units is derived. We note that if the 10,000 sf is used there is still enough net residential acreage to support all the proposed units.

16.8 Design and Performance Standards-Built Environment
Article IV. Streets and Pedestrian Ways/Sidewalks Site Design Standards
16.8.4.2.F. There are two proposed entrances within 1000' of each other. The applicant should apply for a waiver.
16.8.4.3. The Traffic Report and Addendum do not directly address traffic counts within the development (traffic entering and exiting U.S. Route 1 is evaluated). The streets have been designed mostly to Minor Street standards with smaller shoulders (no paved shoulders provided but wider gravel shoulders than required). The applicant should justify the roadway design and apply for a waiver from street design standards if necessary.
16.8.4.4. The Traffic report and Addendum do not directly address traffic counts within the development (traffic entering and exiting U.S. Route 1 is evaluated). The streets have been designed mostly to Minor Street standards with smaller shoulders (no paved shoulders provided but wider gravel shoulders than required). The applicant should justify the roadway design and apply for a waiver from street design standards if necessary.

The applicant should include the width of the right-of-way on the roadway detail.

Article VI.: Water Supply

16.8.6.1 The applicant should show the existing water main location in U.S. Route 1 and provide information on main material and size.
Proposed water service locations and curb stops should be shown on the plans.
Show how the existing relocated hydrant will tie in to the existing or proposed water main. Is this the only hydrant for the site?
Water service detail calls out the main as PVC not ductile iron.

Article VII.: Sewage Disposal

16.8.7.1 The proposed sewer main size and material should be labelled on the plan and details should be provided.
Proposed sewer service and cleanout locations should be shown on the plan.
The proposed location of the sewer main and manholes is not clear-some manholes are in the sidewalk, in driveways, in the grass and potentially outside of the right-of-way. The applicant should justify the location of the main and manholes.
The pipe lengths and slopes should be included on the roadway profile.

Article VIII. Surface Drainage

The proposed stormwater management system limits post development flows to levels lower than pre-development flows and is appropriate for this site, however we have the following minor comments:

- Pipe sizes should be included on the drainage structure schedule.
- The detail for Underdrained Soil Filter Pond 40P shows an incorrect invert out (50.03').

16.8.8.2.D. The O&M manual should conform with the provisions of the post construction stormwater management plan.

Article IX: Parking. Loading and Traffic

16.8.9.1.E. Traffic flow in parking areas needs to be marked with signs and/or surface directions.
16.8.9.4.B. Parking space and aisle dimensions should be indicated on the plans.
16.9.4.D. The 560-sf commercial/office areas on the first floor of the single-family homes do not appear to be included in the parking calculations.
16.8.9.4.D.I.1 The applicant should show dimensions of the accessible parking spaces on the plans.
16.8.9.4.D.I.3 It is not clear that there is an accessible route to connect to the clubhouse.
16.8.9.4.G. The applicant should show that the required number of parking landscaping trees have been provided.

Article X. Signs

The Applicant should submit details of proposed signs for CEO approval.

Article XXIV. Exterior Lighting

The Applicant should provide lighting details (mounting height, uniformity ratios, etc.) to demonstrate conformance with the Ordinance.

General Comments

1. The applicant should provide an existing conditions plan.
2. There are discrepancies in supporting documentation about the number of units proposed.
3. There are leaders on Sheet 2.1 that do not point to anything and do not seem to apply (12" HDPE, retaining wall, 50' wetland setback).
4. There doesn't appear to be access to the dumpster pad.
5. Who is the dumpster intended for?
6. There are items in the legend that are not on the plans (retaining wall, etc.)
7. Where is the location of the timber guardrail?
8. The plans should clearly show which units have 560 sf of commercial/office space.

Should you have any questions, please do not hesitate to call.

Very truly yours,

CMA ENGINEERS, INC.

Re: 459 US Route 1 - Kittery
Revisions

Dear Ms. Connor:

On behalf of Michael Brigham, President of Landmark Hill, LLC, I have enclosed a revised Site Plan, Grading Plan, Stormwater Plan and Pond Plans for your review and consideration. The site is located on 459 US Route 1 in the Mixed Use District and is described by the Town of Kittery Assessor's Map 60 as Lot 24. The parcel contains 20 +/- acres and is located in the Mixed-Use (MU) District. The plan-set is attached.

Please contact me for any additional information or clarifications required.

Sincerely,

Kenneth A. Wood, P.E.
President

THE HOMESTEAD – MIXED USE DEVELOPMENT
U.S. ROUTE 1, KITTERY, MAINE
STORMWATER MANAGEMENT STUDY

Project No.: C052-18 March 28, 2018

♦ Scope

This stormwater management plan has been prepared for The Homestead, a proposed mixed-use development, located on U.S. Route 1, Kittery, Maine. The entire parcel contains approximately 20 acres; the development will include residential units (elderly and market rate units), retail and office space. The project requires a Site Location of Development permit amendment from the Maine Department of Environmental Protection (MDEP) and must meet the Stormwater Management requirements for the Town of Kittery. The project will create approximately 9.8 acres of developed area and approximately 3.7 acres of impervious area.

♦ Site and Watershed Description

The project site is located in the Libby Brook and Johnson Brook watershed. Libby Brook is tributary to York River and ultimately, the Atlantic Ocean. Johnson Brook is tributary to Dolly Gordon Brook, York River and ultimately, the Atlantic Ocean. The York River and portions of Libby Brook and Dolly Gordon Brook are tidal. A 7½ minute series U.S.G.S. map of the project area is attached.

The existing site is developed with a 14,000 S.F. structure (abandoned nursing home) and associated driveways and parking. The remainder of the lot contains woodlands and wetlands.

As mentioned above, the site is located in the watershed of Libby Brook and Johnson Brook; approximately 75% of the site drains toward Libby Brook, which is located on the northwest side of Interstate Route 95. Johnson Brook is located on the southeast side of U.S. Route 1. On site runoff sheet flows across upland areas and several wooded wetlands prior to discharge toward the brooks. The northwest portion of the site contains a small pond with associated wetlands. The topography of the site is gently rolling with several steeper slopes. The majority of grades on-site are from near level to 8%; some areas contain slopes ranging to 15%. A small portion of this site is subject to flooding, see the Site Plan for the 100 year flood zone as determined by the Federal Emergency Management Agency (FEMA). No development is proposed within the 100 year flood zone.

♦ Soils/Hydrologic Soil Groups

Soil types and their respective Hydrologic Soil Groups (HSG) were determined from a Class A High Intensity Soil Survey (HISS) prepared by Michael Cuomo, CSS, SE for this development. On site soil types consist of Biddeford Mucky Peat (Bm), Biddeford-Scantic (Bs), Dixfield (Dx), Elmwood (Em), Scantic (Sc), Lyman-Turbridge (LT), Swanton (Sw) and Westbury (Ws) soils. The Scantic, Biddeford, and Biddeford - Scantic soils are hydric, or wetland soils. Hydrologic Soil Groups (HSG's) range from "C" to "D" for these soil types. Off-site soil types and their HSG's were determined from the Soil Survey of York County, Maine.

♦ **Methodology**

The stormwater quantity analysis will be conducted using the HydroCAD Stormwater Modeling System by Applied Microcomputer Systems. The analysis determines the "Existing Condition" and "Developed Condition" stormwater flows. Both cases are analyzed for the 2, 10 and 25-year, 24-hour frequency storm events. The Existing Condition analyzes the site as it currently exists and the Developed Condition models the site with the proposed improvements described above.

♦ **Water Quantity Analysis**

Existing Condition

The site was divided into four subcatchments (SC) for the Existing Condition analysis. SC 1 is tributary to a wetland and property line at the west side of the site (Analysis Point 1). SC's 2 and 4 are tributary to a wetland and existing pond at the north part of the site (Analysis Point 2). SC 4 includes off-site areas that were part of a 2008 subdivision which created residential lots along Adams Road. This area is assumed to be undeveloped for the Existing Condition analysis. SC 3 is tributary to a wetland on the southeast part of the site, adjacent to Route 1 (Analysis Point 3).

AP's 1 and 2 are tributary to Libby Brook.

The AP's were selected to provide convenient points to compare Existing Condition flows to Developed Condition flows.

Developed Condition

The Developed Condition analysis consists of 20 subcatchments. Other features such as ponds and reaches were added to account for on-site routing and detention of stormwater. Five underdrained soil filter ponds (USF's) are proposed to provide both stormwater detention and treatment. Calculations are provided to show the required Channel Protection Volume (CPV) and area for each USF. All Developed Condition flows were routed to the Analysis Points described above.

Changes in Stormwater Flows

Tables showing Existing Condition peak flows, Developed Condition peak flows and the change in peak flow from Existing Condition to Developed Condition are presented on a separate page.

The analysis indicates decreases in peak flow at AP's 1 and 2 for all storm events, thus no adverse effects on downstream properties or drainage structures are anticipated.

Runoff from the USF ponds will be routed through outlet structures, pipes and level spreaders prior to discharge to undisturbed, on-site areas.

♦ **Water Quality**

In accordance with the MDEP *Chapter 500* General Standards, runoff from developed areas on the site will receive treatment in USF ponds prior to being discharged into on-site wetlands. Approximately 95.7% of the impervious area and 98.4% of the developed area will be treated, exceeding the MDEP General Standards requirements of 95% and 80%, respectively. Treatment calculations and USF sizing calculations are included in this report.

♦ **Summary**

The use of USF ponds to attenuate peak flows will result in no significant increase in peak runoff quantity from the proposed development. No adverse effects are anticipated on any downstream properties or drainage structures for the analyzed storm events. Runoff quality is addressed by the use of Underdrained Soil Filter Ponds.

Sincerely;

Kenneth A. Wood, P.E.
President

OPERATION AND MAINTENANCE PROGRAM

ATTAR
ENGINEERING, INC
CIVIL • STRUCTURAL • MARINE

THE HOMESTEAD - MIXED USE DEVELOPMENT
459 U.S. ROUTE 1
KITTERY, MAINE

OPERATION AND MAINTENANCE PROGRAM STORMWATER MANAGEMENT BMP's

This project contains specific Best Management Practices (BMP's) for the conveyance, storage, and treatment of stormwater and the prevention of erosion. These BMP's consist of swales, underdrained soil filter ponds, catchbasins and culverts. All components should be inspected quarterly, and after every significant rain event of 1" in any 24-hour period. Additional inspection intervals are specified for certain BMP's, specifically, underdrained soil filters.

The party responsible for implementing this Operation and Maintenance Program (O & M Program) shall be the property owner or condominium association.

Swales
All swales should be inspected for accumulation of debris, which could adversely affect the function of this BMP. These areas should also be maintained to have gradual slopes, which prevent channeling of stormwater and erosion of the bottom and sides of the swales.

Catch Basins
All catch basin grates, sumps, and inlets/outlets should be inspected for accumulation of debris, which could adversely affect the function of this BMP. Additionally, the basin inverts shall be inspected for clogging and material soundness. Sumps shall always be clear to a depth of 1' below the outlet invert. Inlet structures shall be inspected and cleaned of debris at least twice annually, once in the spring following snow melt and once in the autumn after leaf fall.

Culverts
Culvert inlets and outlets should be inspected for debris, which could clog the BMP. Additionally, the placement of rip-rap should be inspected to ensure that all areas remain smooth and no areas exhibit erosion in the form of rills or gullies.

Snow Removal
Snow shall be stockpiled only in the approved snow storage areas. Plowing of snow into wetland areas or detention ponds shall be avoided. Additionally, a mostly sand mix (reduced salt) shall be applied during winter months to prevent excessive salt from leaching into wetland areas. Excess sand shall be removed from the storage areas, all paved surfaces and adjacent areas each spring.

Underdrained Soil Filters
The underdrained soil filter area is a very effective BMP, however, long term maintenance is essential to its operation. The soil filter should be inspected after every major storm event during the first year to ensure proper function and at least twice-annually, thereafter. The inspection should ensure that the filter drains within 24 - 48

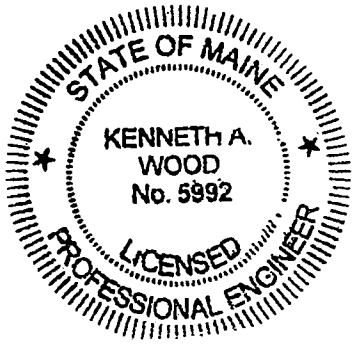
hours. The top several inches of the filter should be replaced with fresh filter material, when water ponds for longer than 72 hours. Debris and sediment that builds up should be removed from the pre-treatment structure at least annually. Outlet structures shall be inspected and cleaned of debris at least twice annually, once in the spring following snow melt and once in the autumn after leaf fall. The height of grass shall be maintained at a maximum of 12"; mowing shall be limited to no more than two times during the growing season.

Seeding, Fertilizing and Mulching

All exposed soil materials and stockpiles must be either temporarily or permanently seeded, fertilized and mulched in accordance with plan specifications. This is one of the most important features of the Erosion Control Plan, which will provide both temporary and permanent stabilization. Eroded or damaged lawn areas must be repaired until a 75% effective growth of vegetation is established and permanently maintained.

Record Keeping

Routine maintenance and inspections will be accomplished by the future property owner/developer [Michael Brigham, Landmark Hill, LLC; 79 Congress Street, Portsmouth, NH 03801, (603)-294-4000] until the condominium association had been formed and maintenance has been turned over to the association. At that time, routine maintenance and inspections will be the responsibility of the condominium association's maintenance staff or third party contracted by the property owner or condominium association. All inspections accomplished in accordance with this program shall be documented on the attached Inspection & Maintenance Log. Copies of the Log shall be kept by the property owner or condominium association, and be made available to the Department (Maine Department of Environmental Protection), upon request.



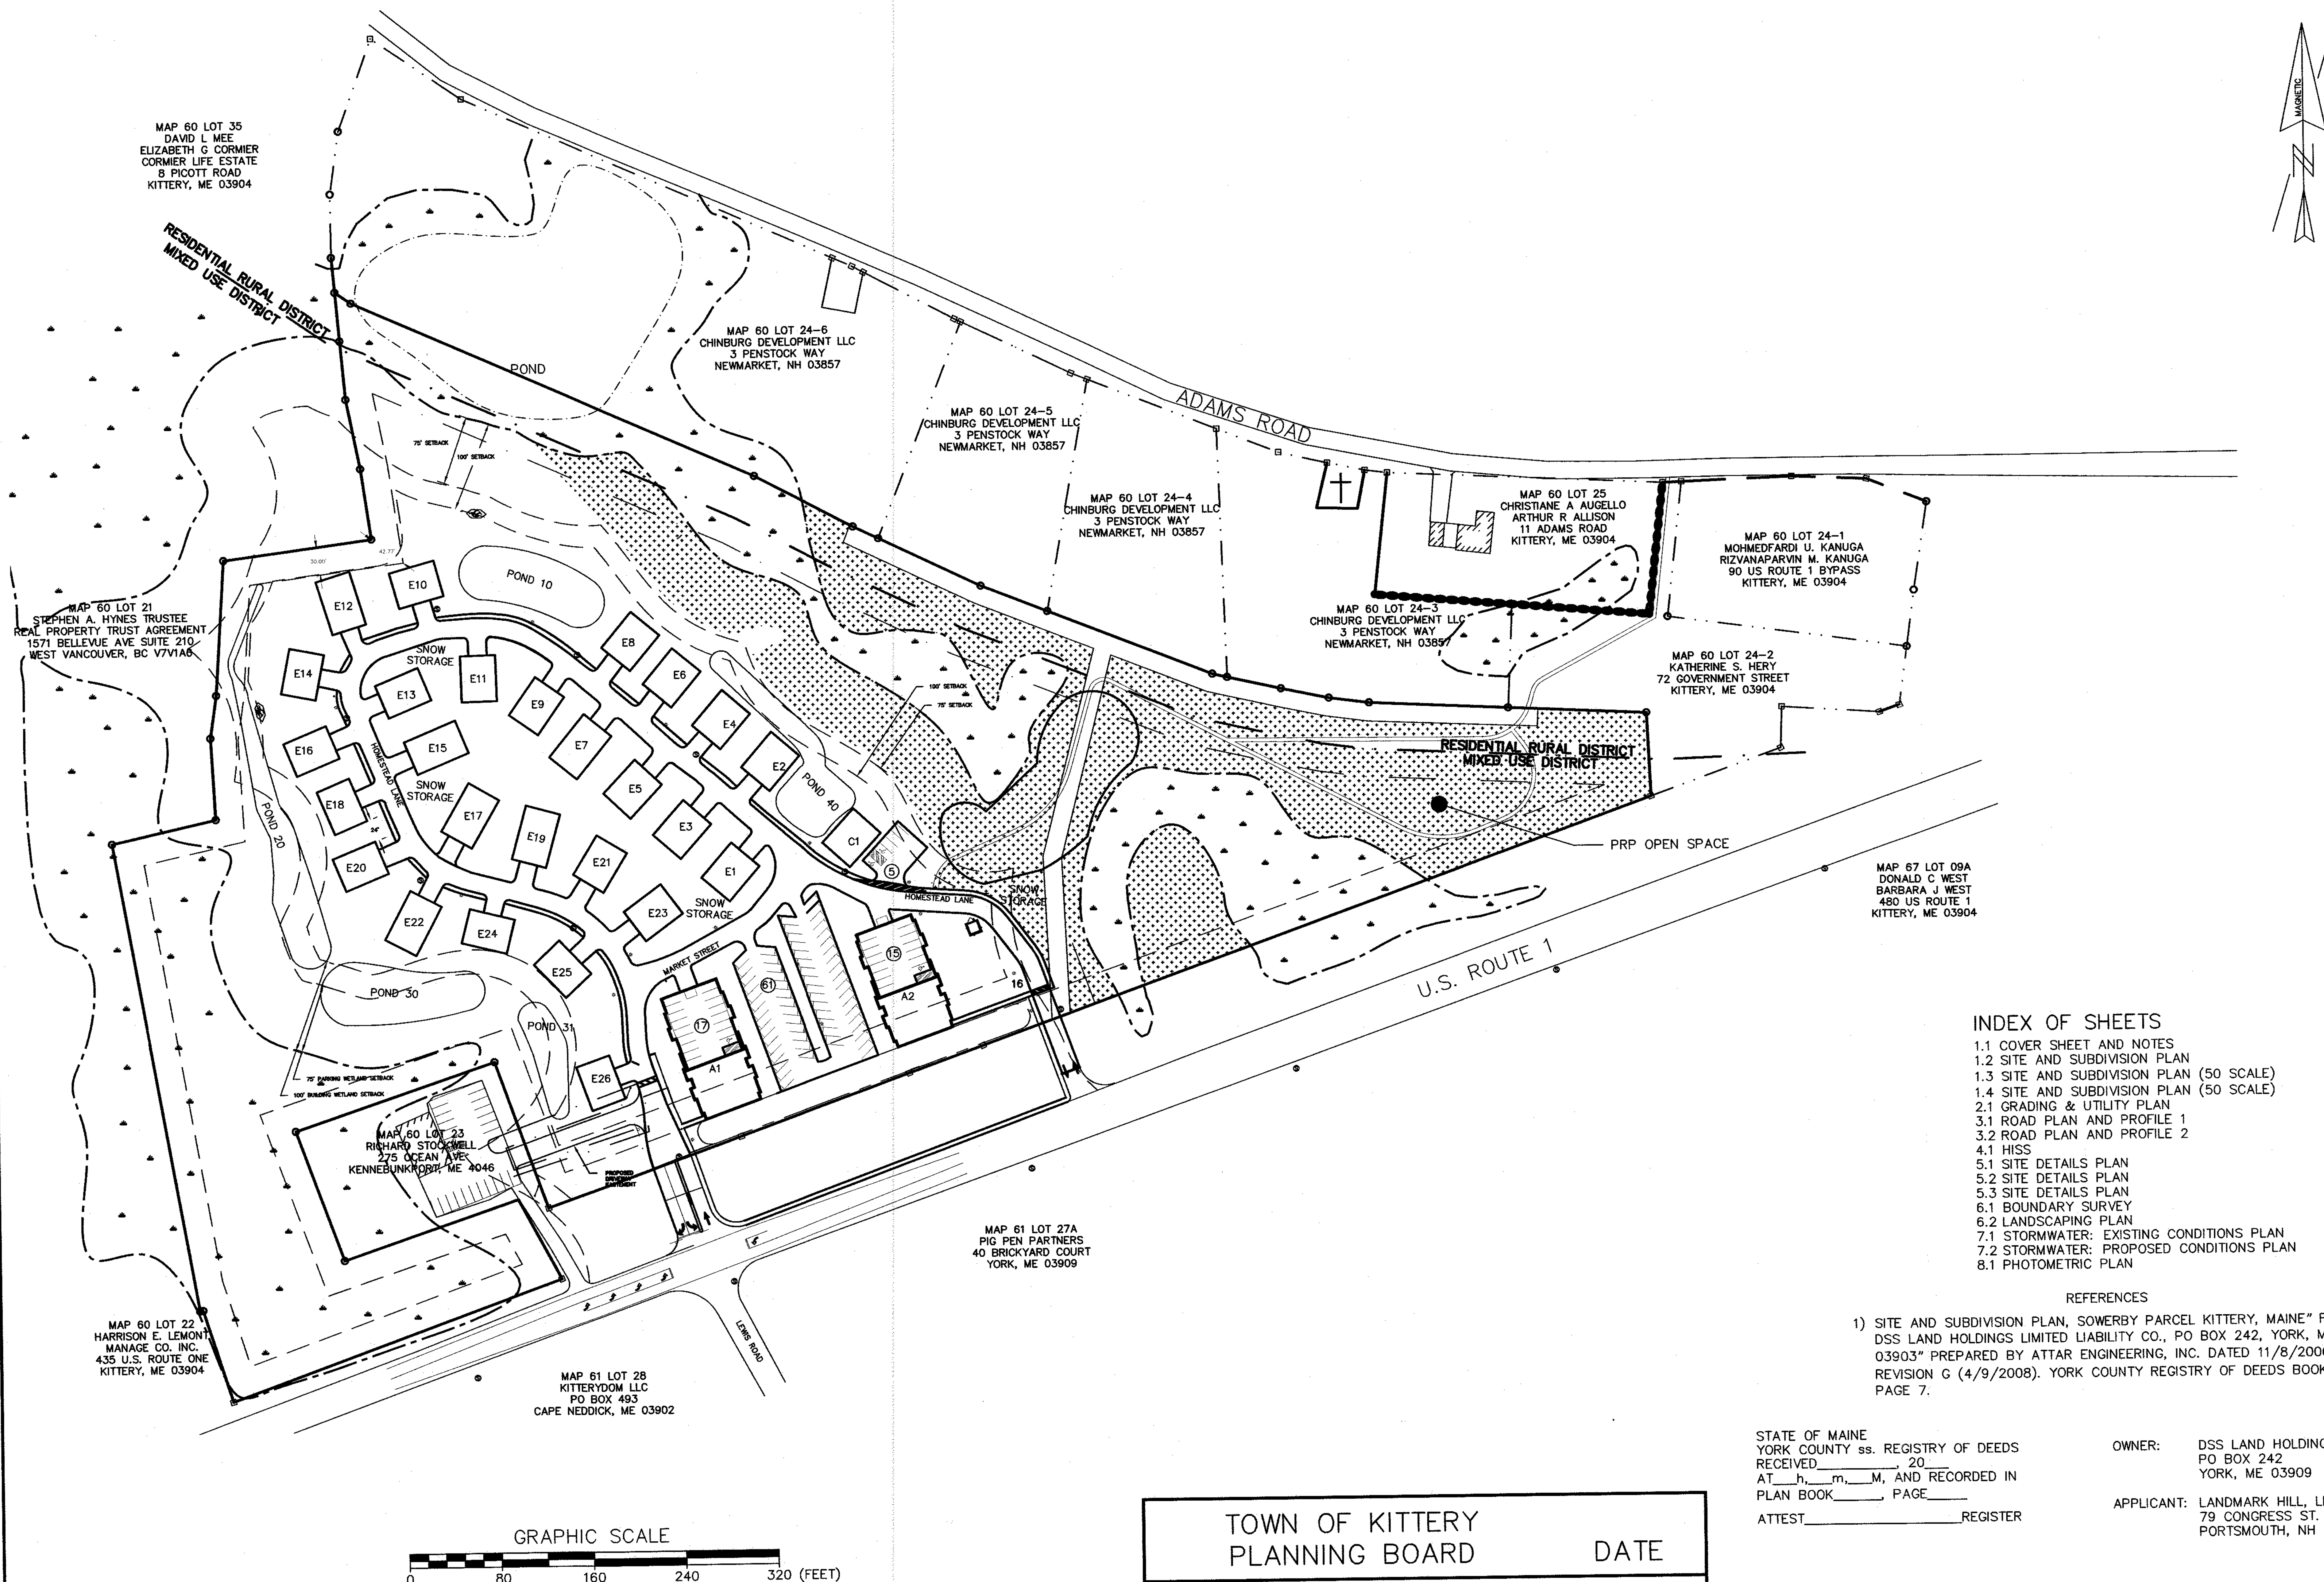
INSPECTION & MAINTENANCE LOG
THE HOMESTEAD – MIXED USE DEVELOPMENT

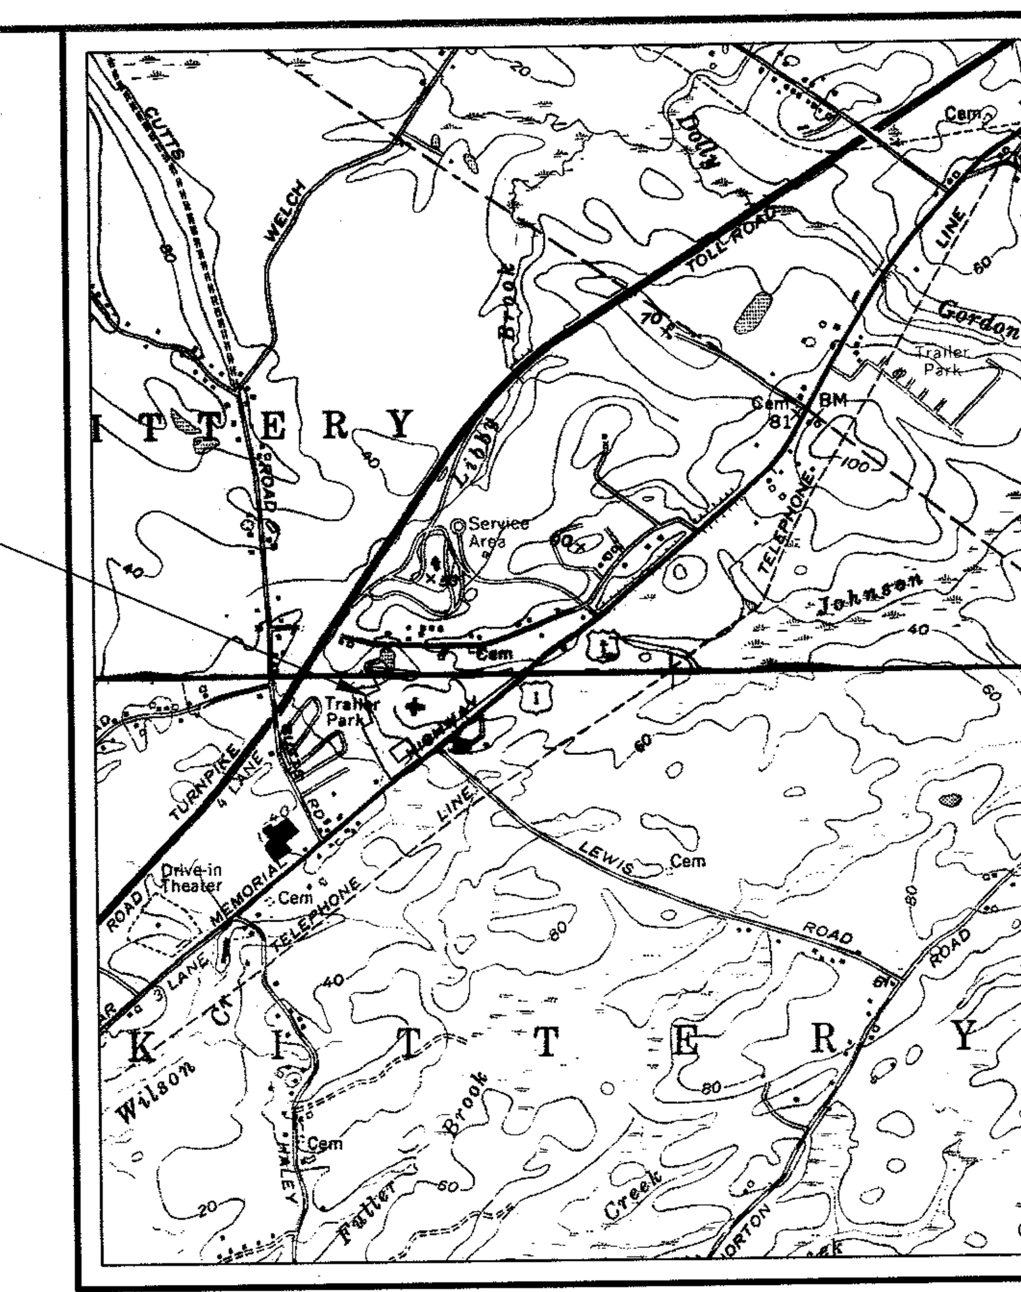
Date	Purpose[1]	Maintenance Done[2]	By

1. Purpose is the reason for the inspection. For example; "quarterly' or "after a significant rain event."
2. Maintenance Done means any maintenance required as a result of the inspection, such as trash removal or re-seeding of areas.

THE HOMESTEAD SUBDIVISION

U.S. ROUTE 1, KITTERY, MAINE





LOCATION MAP
SCALE: 1" = 2,000'

GENERAL NOTES

1) THIS PLAN PROVIDES DETAILS FOR A MIXED USE DEVELOPMENT AT 459 U.S. ROUTE 1 CONSISTING OF 26 SINGLE-FAMILY (ELDERLY) DWELLING UNITS, 2 BUILDINGS CONTAINING 16 APARTMENTS AND TWO COMMERCIAL RETAIL UNITS LOCATED WITHIN THE APARTMENT BUILDINGS AND 1 CLUB HOUSE/OFFICE BUILDING

2) THIS SITE WAS PREVIOUSLY APPROVED AS THE SOWERBY MIXED-USE PROJECT IN 2008. SEE REF. 1.

3) THE PARCEL, IDENTIFIED AS LOT 24 ON TAX MAP 60, CONTAINS APPROXIMATELY 20.12 ACRES; AND IS LOCATED WITHIN THE MIXED-USE (MU), RESIDENTIAL RURAL(R-RL) AND SHORELAND OVERLAY ZONING DISTRICTS. THE PARCEL IS SERVED BY MUNICIPAL WATER AND SEWER SYSTEMS.

4) SPACE AND BULK REQUIREMENTS FOR THE MIXED USE ZONING DISTRICT ARE AS FOLLOWS:

MIXED USE DISTRICT	
MIN. LOT AREA	200,000 SF
MIN. STREET FRONTAGE	250'
MIN. FRONT SETBACK	30'
MIN. SIDE SETBACK	40'
MIN. REAR SETBACK	40'

5) PARKING IS CALCULATED AS FOLLOWS;

UNIT TYPE	NO. OF UNITS./SF	SPACES/UNIT	SF/UNIT	REQUIRED
ELDERLY	26 UNITS	1.5	N/A	39(DRIVEWAYS)
APARTMENTS	16 UNITS	2	N/A	32
RETAIL(A1/A2)	8,000 SF	N/A	175	46
RETAIL(C1)	2,000 SF	N/A	175	12
OFFICE(C1)	2,000 SF	N/A	250	8

TOTAL SPACES = 137 WITH 137 PROVIDED (DRIVEWAYS FOR ELDERLY AND LOTS FOR REMAINING)

6) BUILDABLE AREA/RESIDENTIAL DENSITY

TOTAL PARCEL AREA	=	876427.2 S.F.	=	20.12 AC.
LESS 50% OF WETLANDS SETBACK	=	137495.5 S.F.	=	3.16 AC.
LESS UNSUITABLE SOILS*	=	200630 S.F.	=	4.61 AC.
LESS RIGHTS OF WAY/EASEMENTS**	=	100687 S.F.	=	2.31 AC.
NET RESIDENTIAL AREA	=>	437614.7 S.F.	=	10.04 AC.

*INCLUDES WETLANDS, POORLY DRAINED AND VERY POORLY DRAINED SOILS
**INCLUDING TRAVELED WAYS AND PARKING
NET RESIDENTIAL DENSITY = 437614.7 – (26 X 10,000) – (16 X 7,500) = 57,614.7 => OK

7) COMMERCIAL SPACE REQUIREMENT IS CALCULATED AS FOLLOWS:
2 APARTMENT BLDGS X 9,000 SF X 2 FLOORS = 36000
2 RETAIL SPACES X 3750 SF = 9500
9500/36000 = 26.1% WHICH IS GREATER THAN 10%(REQUIRED).

8) PROPERTY LINES, WETLANDS, EXISTING CONDITIONS AND TOPOGRAPHY ARE FROM REFERENCE 1. WETLANDS WERE IDENTIFIED IN THE FIELD BY KENNETH A. WOOD, CWS IN DECEMBER, 1999 AND MICHAEL R. CUOMO, CWS, CSS IN MARCH, 2000. WETLANDS WERE LOCATED WITH SURVEY INSTRUMENT BY ATTAR ENGINEERING, INC. FROM DECEMBER, 1999 THROUGH APRIL, 2000. WETLAND DELINEATION WAS VERIFIED IN 2017 BY KENNETH A. WOOD, CWS. NO CHANGES WERE NOTED FROM THE PREVIOUS DELINEATION.

9) TOTAL OPEN SPACE REQUIRED IS 35%; 25% OF OPEN SPACE MUST BE IN FRONT 50% OF THE PARCEL: 20.23 AC X 0.35 = 7.08 AC WITH 7.29 AC PROVIDED: 7.08 AC X 0.25 =1.77 AC WITH 5.58 AC PROVIDED IN THE FRONT OF THE PARCEL.

10) LANDSCAPING ALONG THE FRONTAGE OF US ROUTE 1 SHALL CONSIST OF AT LEAST ONE SUGAR MAPLE (ACER SACCHARUM) OR APPROVED EQUAL ON 25' C.L. SPACING AND A MIX OF 10 SHRUBS AND/OR FLOWERING PERENNIAL PLANT SPECIES FOR EVERY 40' OF FRONTAGE

11) ALL BUILDINGS WILL BE SPRINKLED FOR FIRE PROTECTION.

12) TOTAL AREA TO BE DISTURBED: 9.79 ACRES, TOTAL IMPERVIOUS AREA: 3.72 ACRES, TOTAL LOT STREET FRONTAGE 1655.7 FT.

TAX MAP 24, LOT 60

GENERAL NOTES

1. SEWER MAINS TO BE 8" SDR 35 PVC. ALL OTHER APPURTENANCES SHALL MEET KITTERY SEWER DISTRICT STANDARDS.

2. ALL PIPES, VALVES, FITTINGS, AND CONNECTIONS SHALL MEET CURRENT KITTERY WATER DISTRICT STANDARDS.

3. ALL STORM DRAINS TO BE ADS N-12 (PE) OR APPROVED EQUAL.

4. A MINIMUM OF 5.0' OF COVER SHALL BE MAINTAINED OVER ALL WATER LINES.

5. CENTRAL MAINE POWER COMPANY WILL PREPARE THE ELECTRICAL PLAN FOR CONSTRUCTION. ALL ELECTRICAL, TELEPHONE, AND CABLE SERVICES WILL BE UNDERGROUND.

6. NEW WATER AND SEWER LINES SHALL BE TESTED IN ACCORDANCE WITH RESPECTIVE DISTRICT REQUIREMENTS.

7. EACH E & S CELL REPRESENTS A LIMITED AREA TO BE CONSTRUCTED WITH ALL EROSION & SEDIMENT CONTROL MEASURES IN PLACE. ALL "CELLS" SHALL BE PROTECTED BY EROSION & SEDIMENT CONTROL BEST MANAGEMENT PRACTICES AS REQUIRED BY THE E & S PLAN. EROSION & SEDIMENT CONTROL SHALL BE MAINTAINED FOR EACH CELL THROUGH-OUT THE COMPLETION OF THE ENTIRE PROJECT. THE CELLS SHALL BE ESTABLISHED IN THERE NUMERICAL ORDER.

GENERAL NOTES

1. PROPERTY LINES, WETLANDS, EXISTING CONDITIONS AND TOPOGRAPHY ARE FROM REFERENCE 1. WETLANDS WERE IDENTIFIED IN THE FIELD BY KENNETH A. WOOD, CWS IN DECEMBER, 1999 AND MICHAEL R. CUOMO, CWS, CSS IN MARCH, 2000. WETLANDS WERE LOCATED WITH SURVEY INSTRUMENT BY ATTAR ENGINEERING, INC. FROM DECEMBER, 1999 THROUGH APRIL, 2000. WETLAND DELINEATION WAS VERIFIED IN 2017 BY KENNETH A. WOOD, CWS. NO CHANGES WERE NOTED FROM THE PREVIOUS DELINEATION.

2. SOIL TYPES SHOWN ON THIS PLAN WERE IDENTIFIED BY MICHAEL CUOMO (MAINE CERTIFIED SOIL SCIENTIST #211) IN APRIL, 2000.

10 JAN 2018

MICHAEL CUOMO, MAINE CERTIFIED SOIL SCIENTIST #211

TAX MAP 24, LOT 60

EROSION & SEDIMENTATION CONTROL NOTES

1. SILTATION FENCE OR HAY BALE BARRIERS WILL BE INSTALLED DOWNSLOPE OF ALL STRIPPING OR CONSTRUCTION OPERATIONS. A DOUBLE SILT FENCE BARRIER SHALL BE INSTALLED DOWNSLOPE OF ANY SOIL MATERIAL STOCKPILES. SILT FENCES SHALL BE INSPECTED AFTER EACH RAIN EVENT AND DAILY DURING PROLONGED RAIN. SILT AND SOIL PARTICLES ACCUMULATING BEHIND THE FENCE SHALL BE REMOVED AFTER EACH SIGNIFICANT RAIN EVENT AND IN NO INSTANCE SHOULD ACCUMULATION EXCEED 1/2 THE HEIGHT OF THE FENCE. TORN OR DAMAGED AREAS SHALL BE REPAIRED.
2. TEMPORARY AND PERMANENT VEGETATION AND MULCHING IS AN INTEGRAL COMPONENT OF THE EROSION AND SEDIMENTATION CONTROL PLAN. ALL AREAS SHALL BE INSPECTED AND MAINTAINED UNTIL THE DESIRED VEGETATIVE COVER IS ESTABLISHED. THESE CONTROL MEASURES ARE ESSENTIAL TO EROSION PREVENTION AND ALSO REDUCE COSTLY REWORK OF GRADED AND SHAPED AREAS.
3. SEEDING, FERTILIZER AND LIME RATES AND TIME OF APPLICATION WILL BE DEPENDENT ON SOIL REQUIREMENTS. TEMPORARY VEGETATION SHALL BE MAINTAINED IN THESE AREAS UNTIL PERMANENT SEEDING IS APPLIED. ADDITIONALLY, EROSION AND SEDIMENTATION MEASURES SHALL BE MAINTAINED UNTIL PERMANENT VEGETATION IS ESTABLISHED.
4. ALL LAWN AREA, OUTER POND SIDE SLOPES AND SWALES SHALL BE PERMANENTLY SEEDED WITH THE FOLLOWING MIXTURE: 20 LB/ACRE CREEPING RED FESCUE, 2 LB/ACRE REDTOP AND 20 LB/ACRE TALL FESCUE FOR A TOTAL OF 42 LB/ACRE. FERTILIZER AND LIME RATES SHALL BE DEPENDENT ON SOIL TESTING. IN THE ABSENCE OF SOIL TESTS, FERTILIZE WITH 10-20-20 (N-P205-K201) AT 800 LB/ACRE AND LIME AT 3 TONS/ACRE. MULCH WITH HAY AT 70-90 LB/1000 S.F. 4" OF LOAM SHALL BE APPLIED PRIOR TO SEEDING.
5. POND BOTTOMS AND INNER POND SIDESLOPES SHALL BE PERMANENTLY SEEDED WITH THE FOLLOWING MIXTURE: 20 LB/ACRE CREEPING RED FESCUE, 8 LB/ACRE BIRDSFOOT TREFOIL AND 20 LB/ACRE TALL FESCUE FOR A TOTAL OF 48 LB/ACRE. SEE THE ABOVE NOTE FOR FERTILIZER, LIME AND MULCHING RATES.
6. TEMPORARY VEGETATION OF ALL DISTURBED AREAS, MATERIAL STOCKPILES AND OTHER SUCH AREAS SHALL BE ESTABLISHED BY SEEDING WITH EITHER WINTER RYE AT A RATE OF 112 LB/ACRE OR ANNUAL RYEGRASS AT A RATE OF 40 LB/ACRE. WINTER RYE SHALL BE USED FOR FALL SEEDING AND ANNUAL RYEGRASS FOR SHORT DURATION SEEDING. SEEDING SHALL BE ACCOMPLISHED BEFORE OCTOBER 1.
7. TEMPORARY SEEDING OF DISTURBED AREAS SHALL BE ACCOMPLISHED BEFORE OCTOBER 1. PERMANENT SEEDING SHALL BE ACCOMPLISHED BEFORE SEPTEMBER 15.
8. ALL SEEDED AREAS SHALL BE MULCHED WITH HAY AT A RATE OF 2 BALES (70-90 LB) PER 1000 S.F. OF SEEDED AREA.
9. SLOPES 2:1 OR STEEPER SHALL BE TREATED WITH POLYJUTE OPEN WEAVE GEOTEXTILE (OR EQUIVALENT) AFTER SEEDING. JUTE MATS SHALL BE ANCHORED PER MANUFACTURER'S SPECIFICATIONS.
10. EXCESSIVE DUST CAUSED BY CONSTRUCTION OPERATIONS SHALL BE CONTROLLED BY APPLICATION OF WATER OR CALCIUM CHLORIDE.
11. THE CONTRACTOR MAY OPT TO USE EROSION CONTROL MIX BERM AS A SEDIMENT BARRIER IN LIEU OF SILTATION FENCE OR HAY BALE BARRIERS WITH APPROVAL FROM THE INSPECTING ENGINEER.
12. MINIMIZE DISTURBED AREAS AND PROTECT NATURAL DOWNGRADIENT BUFFER AREAS TO THE EXTENT PRACTICABLE. CONTROL STORMWATER VOLUME AND VELOCITY WITHIN THE SITE TO MINIMIZE SOIL EROSION. MINIMIZE THE DISTURBANCE OF STEEP SLOPES. CONTROL STORMWATER DISCHARGES, INCLUDING BOTH PEAK FLOW RATES AND VOLUME, TO MINIMIZE EROSION AT OUTLETS. THE DISCHARGE MAY NOT RESULT IN EROSION OF ANY OPEN DRAINAGE CHANNELS, SWALES, STREAM CHANNELS OR STREAM BANKS, UPLAND, OR COASTAL OR FRESHWATER WETLANDS OFF THE PROJECT SITE.

EROSION & SED. CONTROL NOTES (CONT.)

13. WHENEVER PRACTICABLE, NO DISTURBANCE ACTIVITIES SHOULD TAKE PLACE WITHIN 50 FEET OF ANY PROTECTED NATURAL RESOURCE. IF DISTURBANCE ACTIVITIES TAKE PLACE BETWEEN 30 FEET AND 50 FEET OF ANY PROTECTED NATURAL RESOURCE, AND STORMWATER DISCHARGES THROUGH THE DISTURBED AREAS TOWARD THE PROTECTED NATURAL RESOURCE, PERIMETER EROSION CONTROLS MUST BE DOUBLED. IF DISTURBANCE ACTIVITIES TAKE PLACE LESS THAN 30 FEET FROM ANY PROTECTED NATURAL RESOURCE, AND STORMWATER DISCHARGES THROUGH THE DISTURBED AREAS TOWARD THE PROTECTED NATURAL RESOURCE, PERIMETER EROSION CONTROLS MUST BE DOUBLED AND DISTURBED AREAS MUST BE TEMPORARILY OR PERMANENTLY STABILIZED WITHIN 7 DAYS.
14. PRIOR TO CONSTRUCTION, PROPERLY INSTALL SEDIMENT BARRIERS AT THE DOWNGRADIENT EDGE OF ANY AREA TO BE DISTURBED AND ADJACENT TO ANY DRAINAGE CHANNELS WITHIN THE DISTURBED AREA. SEDIMENT BARRIERS SHOULD BE INSTALLED DOWNGRADIENT OF SOIL OR SEDIMENT STOCKPILES AND STORMWATER PREVENTED FROM RUNNING ONTO THE STOCKPILE. MAINTAIN THE SEDIMENT BARRIERS BY REMOVING ACCUMULATED SEDIMENT, OR REMOVING AND REPLACING THE BARRIER, UNTIL THE DISTURBED AREA IS PERMANENTLY STABILIZED. WHERE A DISCHARGE TO A STORM DRAIN INLET OCCURS, IF THE STORM DRAIN CARRIES WATER DIRECTLY TO A SURFACE WATER AND YOU HAVE AUTHORITY TO ACCESS THE STORM DRAIN INLET, YOU MUST INSTALL AND MAINTAIN PROTECTION MEASURES THAT REMOVE SEDIMENT FROM THE DISCHARGE.
15. PRIOR TO CONSTRUCTION, PROPERLY INSTALL A STABILIZED CONSTRUCTION ENTRANCE (SCE) AT ALL POINTS OF EGRESS FROM THE SITE. THE SCE IS A STABILIZED PAD OF AGGREGATE, UNDERLAIN BY A GEOTEXTILE FILTER FABRIC, USED TO PREVENT TRAFFIC FROM TRACKING MATERIAL AWAY FROM THE SITE ONTO PUBLIC ROW'S. MAINTAIN THE SCE UNTIL ALL DISTURBED AREAS ARE STABILIZED.
16. WITHIN 7 DAYS OF THE CESSATION OF CONSTRUCTION ACTIVITIES IN AN AREA THAT WILL NOT BE WORKED FOR MORE THAN 7 DAYS, STABILIZE ANY EXPOSED SOIL WITH MULCH, OR OTHER NON-ERODIBLE COVER. STABILIZE AREAS WITHIN 75 FEET OF A WETLAND OR WATERBODY WITHIN 48 HOURS OF THE INITIAL DISTURBANCE OF THE SOIL OR PRIOR TO ANY STORM EVENT, WHICHEVER COMES FIRST.
17. REMOVE ANY TEMPORARY CONTROL MEASURES, SUCH AS SILTATION FENCE, WITHIN 30 DAYS AFTER PERMANENT STABILIZATION IS ATTAINED. REMOVE ANY ACCUMULATED SEDIMENTS AND STABILIZE.
18. IF THE AREA WILL NOT BE WORKED FOR MORE THAN ONE YEAR OR HAS BEEN BROUGHT TO FINAL GRADE, THEN PERMANENTLY STABILIZE THE AREA WITHIN 7 DAYS BY PLANTING VEGETATION, SEEDING, SOD, OR THROUGH THE USE OF PERMANENT MULCH, OR RIPRAP, OR ROAD SUB-BASE. IF USING VEGETATION FOR STABILIZATION, SELECT THE PROPER VEGETATION FOR THE LIGHT, MOISTURE, AND SOIL CONDITIONS; AMEND AREAS OF DISTURBED SUBSOILS WITH TOPSOIL, COMPOST, OR FERTILIZERS; PROTECT SEEDED AREAS WITH MULCH OR, IF NECESSARY, EROSION CONTROL BLANKETS; AND SCHEDULE SODDING, PLANTING, AND SEEDING SO TO AVOID DIE-OFF FROM SUMMER DROUGHT AND FALL FROSTS. NEWLY SEEDED OR SODDED AREAS MUST BE PROTECTED FROM VEHICLE TRAFFIC, EXCESSIVE PEDESTRIAN TRAFFIC, AND CONCENTRATED RUNOFF UNTIL THE VEGETATION IS WELL-ESTABLISHED WITH 90% COVER BY HEALTHY VEGETATION. IF NECESSARY, AREAS MUST BE REWORKED AND RESTABILIZED IF GERMINATION IS SPARSE, PLANT COVERAGE IS SPOTTY, OR TOPSOIL EROSION IS EVIDENT. ONE OR MORE OF THE FOLLOWING MAY APPLY TO A PARTICULAR SITE.
19. FOR SEEDED AREAS, PERMANENT STABILIZATION MEANS A 90% COVER OF THE DISTURBED AREA WITH MATURE, HEALTHY PLANTS WITH NO EVIDENCE OF WASHING OR RILLING OF THE TOPSOIL.
20. FOR SODDED AREAS, PERMANENT STABILIZATION MEANS THE COMPLETE BINDING OF THE SOD ROOTS INTO THE UNDERLYING SOIL WITH NO SLUMPING OF THE SOD OR DIE-OFF.
21. FOR MULCHED AREAS, PERMANENT MULCHING MEANS TOTAL COVERAGE OF THE EXPOSED AREA WITH AN APPROVED MULCH MATERIAL. EROSION CONTROL MIX MAY BE USED AS MULCH FOR PERMANENT STABILIZATION ACCORDING TO THE APPROVED APPLICATION RATES AND LIMITATIONS.
22. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ADEQUATE HOUSEKEEPING PRACTICES DURING THE CONSTRUCTION OF THE PROJECT. THESE STANDARDS CAN BE FOUND IN THE FOLLOWING DOCUMENT: MDEP CHAPTER 500 (STORMWATER MANAGEMENT), APPENDIX C. HOUSEKEEPING. HOUSEKEEPING PRACTICES INCLUDE, BUT ARE NOT LIMITED TO, SPILL PREVENTION, GROUNDWATER PROTECTION, FUGITIVE SEDIMENT AND DUST, DEBRIS AND OTHER MATERIALS, EXCAVATION DEWATERING, AUTHORIZED NON-STORMWATER DISCHARGES AND UNAUTHORIZED NON-STORMWATER DISCHARGES.

WINTER CONSTRUCTION NOTES

NOVEMBER 1 – APRIL 15

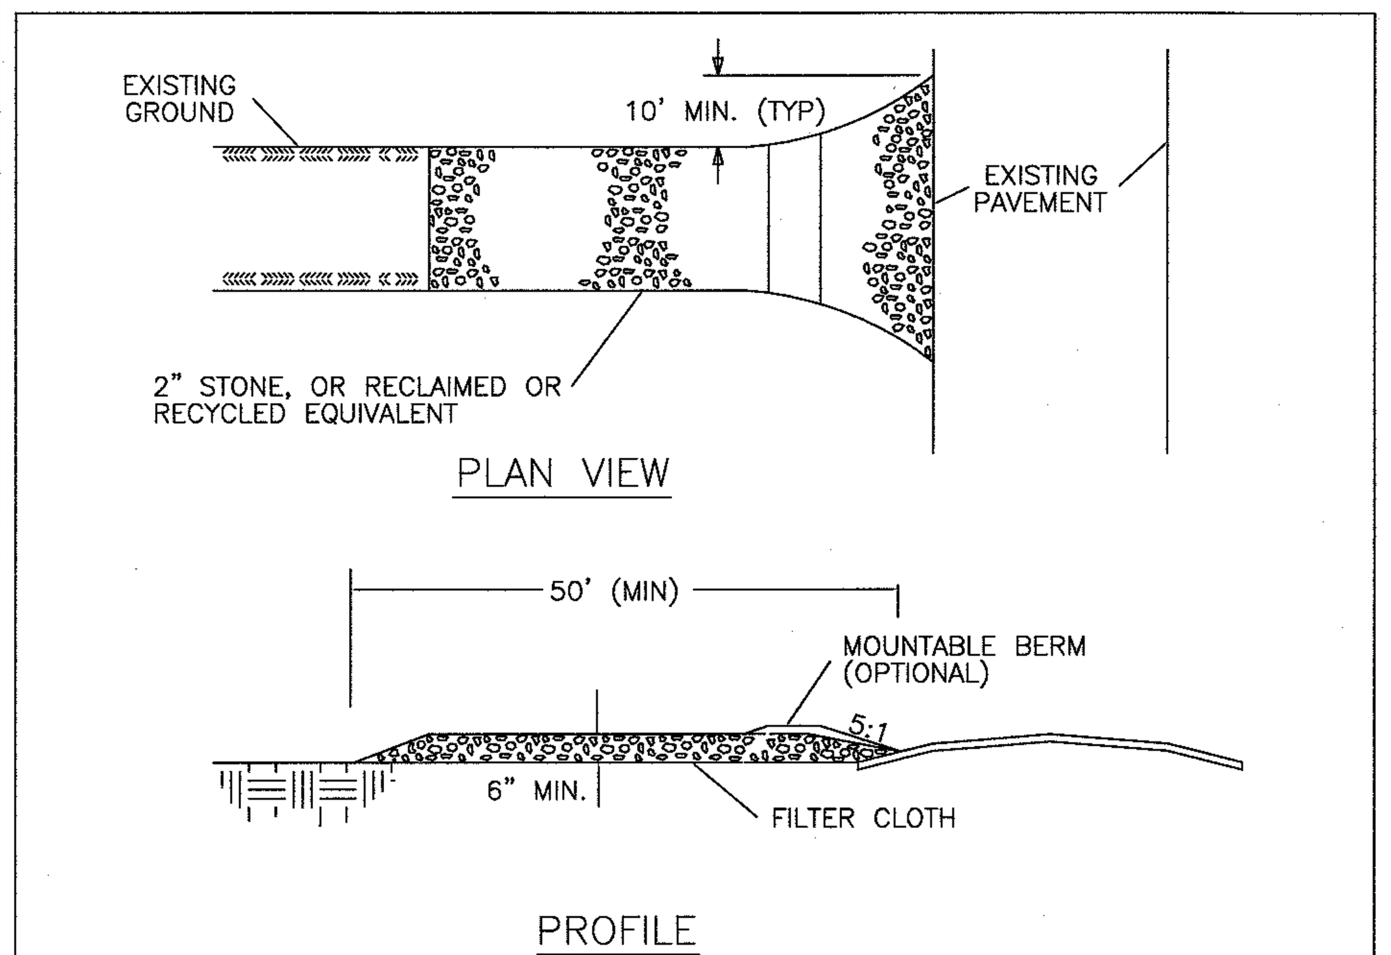
1. AN AREA SHALL BE CONSIDERED STABILIZED WHEN EXPOSED SURFACES HAVE BEEN EITHER MULCHED WITH HAY AT A RATE OF 100 LB/1000 S.F. OR DORMANT SEEDED, MULCHED AND ADEQUATELY ANCHORED BY AN APPROVED ANCHORING TECHNIQUE. IN ALL CASES, MULCH SHALL BE APPLIED SO THAT THE SOIL SURFACE IS NOT VISIBLE THROUGH THE MULCH.
2. FROM OCTOBER 15 TO APRIL 1, LOAM AND SEED WILL NOT BE REQUIRED. DURING PERIODS OF TEMPERATURES ABOVE FREEZING, DISTURBED AREAS SHALL BE FINE GRADED AND PROTECTED WITH MULCH OR TEMPORARILY SEEDED AND MULCHED UNTIL PERMANENT SEEDING CAN BE APPLIED. AFTER NOVEMBER 1, DISTURBED AREAS MAY BE LOAMED, FINE GRADED AND DORMANT SEEDED AT A RATE 200-300% HIGHER THAN THE SPECIFIED PERMANENT SEEDING RATE. IF CONSTRUCTION CONTINUES DURING FREEZING WEATHER, DISTURBED AREAS SHALL BE GRADED BEFORE FREEZING AND TEMPORARILY STABILIZED WITH MULCH. DISTURBED AREAS SHALL NOT BE LEFT OVER THE WINTER OR FOR ANY OTHER EXTENDED PERIOD OF TIME UNLESS STABILIZED WITH MULCH.
3. FROM NOVEMBER 1 TO APRIL 15 ALL MULCH SHALL BE ANCHORED BY EITHER PEG LINE, MULCH NETTING, ASPHALT EMULSION CHEMICAL, TRACK OR WOOD CELLULOSE FIBER. MULCH NETTING SHALL BE USED TO ANCHOR MULCH IN ALL DRAINAGE WAYS WITH SLOPES GREATER THAN 3%, SLOPES EXPOSED TO DIRECT WINDS AND FOR SLOPES GREATER THAN 8%. MULCH NETTING SHALL BE USED TO ANCHOR MULCH IN ALL AREAS WITH SLOPES GREATER THAN 15%. AFTER OCTOBER 1, THE SAME APPLIES TO ALL SLOPES GREATER THAN 8%.
4. SNOW SHALL BE REMOVED FROM AREAS OF SEEDING AND MULCHING PRIOR TO PLACEMENT.
5. FOR WINTER STABILIZATION, HAY MULCH SHALL BE APPLIED AT TWICE THE STANDARD TEMPORARY STABILIZATION RATE. AT THE END OF EACH CONSTRUCTION DAY, AREAS THAT HAVE BEEN BROUGHT TO FINAL GRADE SHALL BE STABILIZED. MULCH SHALL NOT BE SPREAD ON TOP OF SNOW.
6. ALL AREAS WITHIN 75 FEET OF A PROTECTED NATURAL RESOURCE SHALL BE PROTECTED WITH A DOUBLE ROW OF SEDIMENT BARRIERS.
7. ALL VEGETATED DITCH LINES THAT HAVE NOT BEEN STABILIZED BY NOVEMBER 1, OR WILL BE WORKED DURING THE WINTER CONSTRUCTION PERIOD, SHALL BE STABILIZED WITH AN APPROPRIATE STONE LINING BACKED BY AN APPROPRIATE GRAVEL BED OR GEOTEXTILE UNLESS SPECIFICALLY RELEASED FROM THIS STANDARD BY THE MDEP.
8. MULCH NETTING SHALL BE USED TO ANCHOR MULCH ON ALL SLOPES GREATER THAN 8% UNLESS EROSION CONTROL BLANKETS OR EROSION CONTROL MIX IS BEING USED ON SUCH SLOPES.

E&S INSPECTION/MAINTENANCE DURING CONSTRUCTION

A. INSPECTION AND CORRECTIVE ACTION. INSPECT DISTURBED AND IMPERVIOUS AREAS, EROSION CONTROL MEASURES, MATERIALS STORAGE AREAS THAT ARE EXPOSED TO PRECIPITATION, AND LOCATIONS WHERE VEHICLES ENTER OR EXIT THE SITE. INSPECT THESE AREAS AT LEAST ONCE A WEEK AS WELL AS BEFORE AND WITHIN 24 HOURS AFTER A STORM EVENT (RAINFALL), AND PRIOR TO COMPLETING PERMANENT STABILIZATION MEASURES. A PERSON WITH KNOWLEDGE OF EROSION AND STORMWATER CONTROL, INCLUDING THE STANDARDS AND CONDITIONS IN THE PERMIT, SHALL CONDUCT THE INSPECTIONS.

B. MAINTENANCE. IF BEST MANAGEMENT PRACTICES (BMPS) NEED TO BE REPAIRED, THE REPAIR WORK SHOULD BE INITIATED UPON DISCOVERY OF THE PROBLEM BUT NO LATER THAN THE END OF THE NEXT WORKDAY. IF ADDITIONAL BMPS OR SIGNIFICANT REPAIR OF BMPS ARE NECESSARY, IMPLEMENTATION MUST BE COMPLETED WITHIN 7 CALENDAR DAYS AND PRIOR TO ANY STORM EVENT (RAINFALL). ALL MEASURES MUST BE MAINTAINED IN EFFECTIVE OPERATING CONDITION UNTIL AREAS ARE PERMANENTLY STABILIZED.

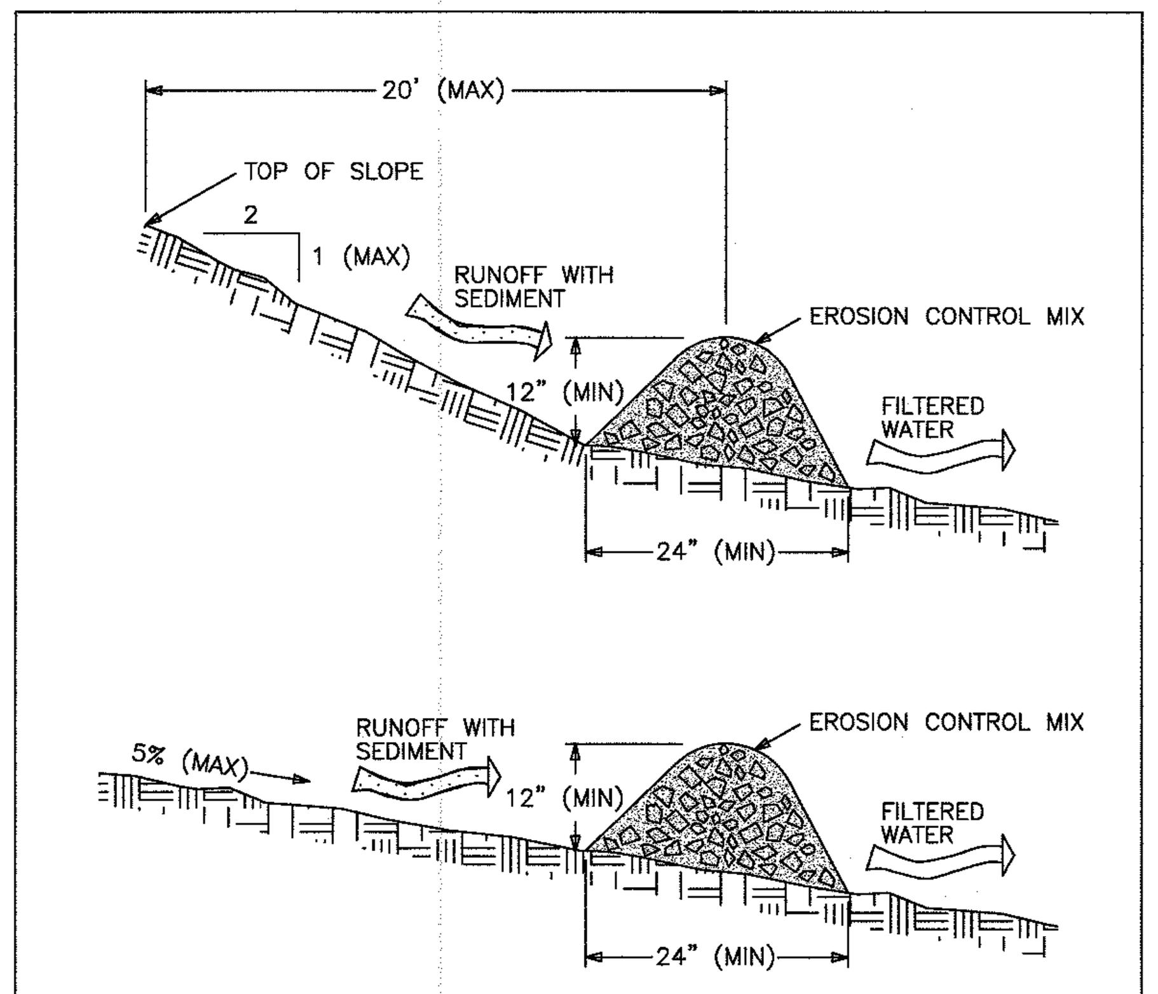
C. DOCUMENTATION. KEEP A LOG (REPORT) SUMMARIZING THE INSPECTIONS AND ANY CORRECTIVE ACTION TAKEN. THE LOG MUST INCLUDE THE NAME(S) AND QUALIFICATIONS OF THE PERSON MAKING THE INSPECTIONS, THE DATE(S) OF THE INSPECTIONS, AND MAJOR OBSERVATIONS ABOUT THE OPERATION AND MAINTENANCE OF EROSION AND SEDIMENTATION CONTROLS, MATERIALS STORAGE AREAS, AND VEHICLES ACCESS POINTS TO THE PARCEL. MAJOR OBSERVATIONS MUST INCLUDE BMPS THAT NEED MAINTENANCE, BMPS THAT FAILED TO OPERATE AS DESIGNED OR PROVED INADEQUATE FOR A PARTICULAR LOCATION, AND LOCATION(S) WHERE ADDITIONAL BMPS ARE NEEDED. FOR EACH BMP REQUIRING MAINTENANCE, BMP NEEDING REPLACEMENT, AND LOCATION NEEDING ADDITIONAL BMPS, NOTE IN THE LOG THE CORRECTIVE ACTION TAKEN AND WHEN IT WAS TAKEN. THE LOG MUST BE MADE ACCESSIBLE TO DEPARTMENT STAFF AND A COPY MUST BE PROVIDED UPON REQUEST. THE PERMITTEE SHALL RETAIN A COPY OF THE LOG FOR A PERIOD OF AT LEAST THREE YEARS FROM THE COMPLETION OF PERMANENT STABILIZATION.



NOTES:

1. GEOTEXTILE: PLACE FILTER CLOTH OVER ENTIRE AREA TO BE COVERED WITH AGGREGATE. FILTER CLOTH WILL NOT BE REQUIRED ON A SINGLE FAMILY RESIDENTIAL LOT.
2. PIPING OF SURFACE WATER UNDER ENTRANCE SHALL BE PROVIDED AS REQUIRED. IF PIPING IS IMPOSSIBLE, A MOUNTABLE BERM WITH A 5:1 SLOPE WILL BE PERMITTED.

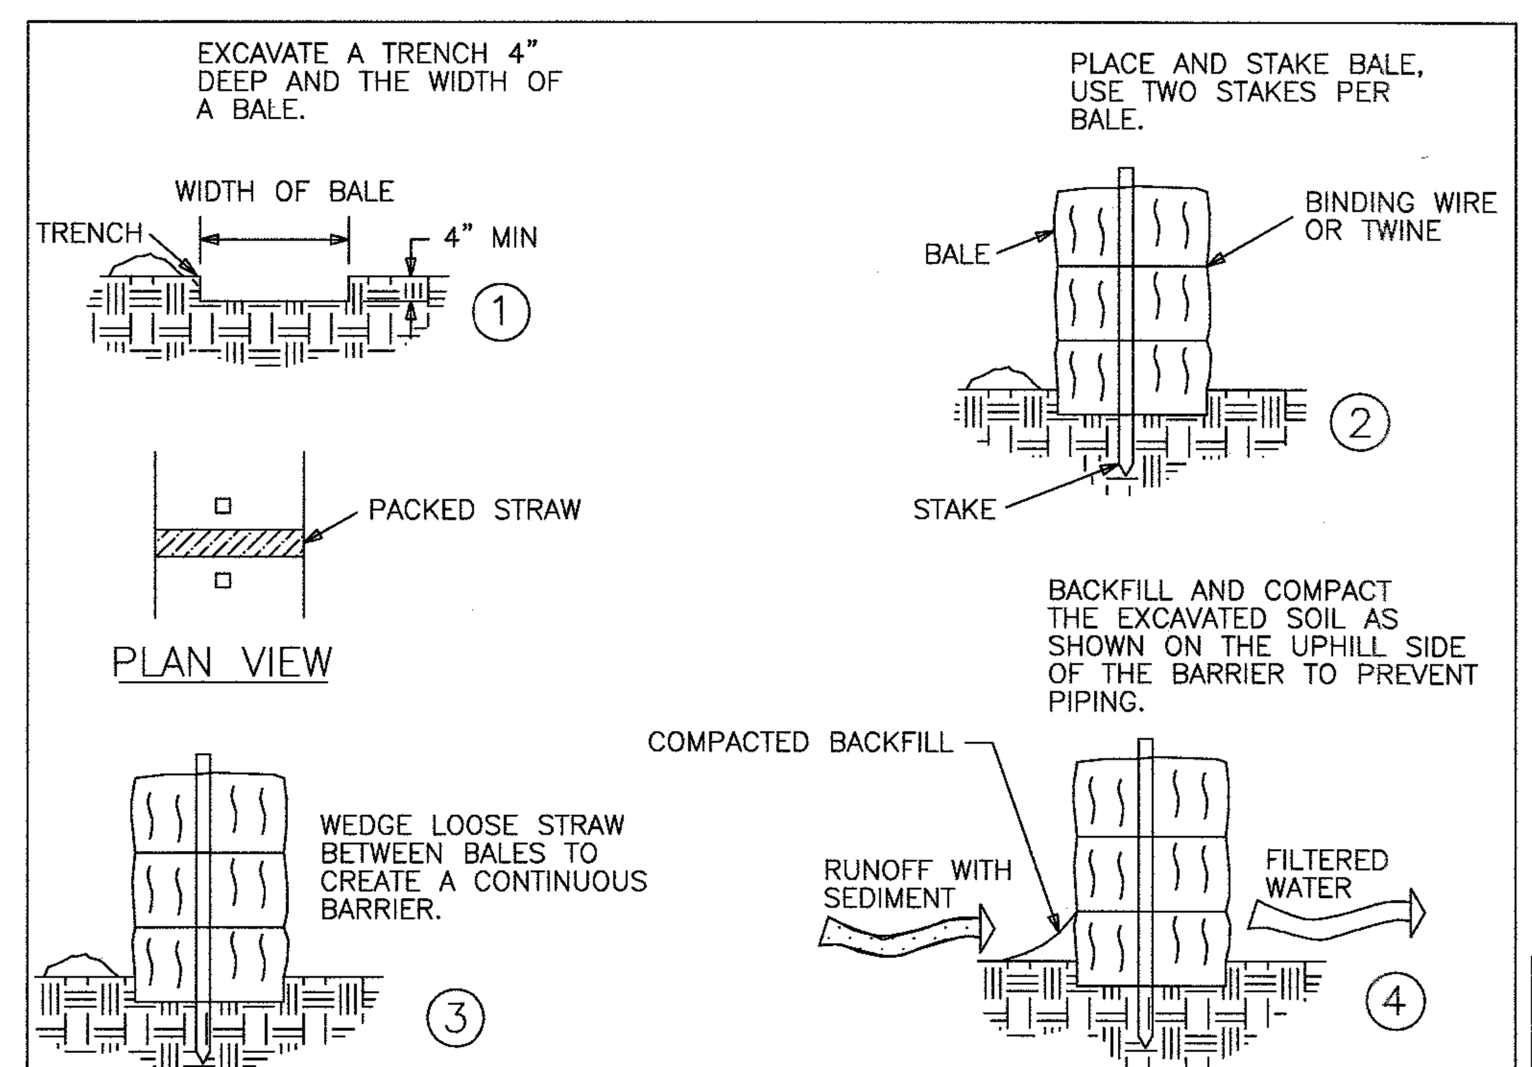
STABILIZED CONSTRUCTION ENTRANCE



EROSION CONTROL MIX COMPOSITION STANDARDS:

- THE ORGANIC MATTER CONTENT SHALL BE BETWEEN 80 AND 100%, DRY WEIGHT BASIS.
- PARTICLE SIZE BY WEIGHT SHALL BE 100% PASSING A 6" SCREEN AND A MINIMUM OF 70%, MAXIMUM OF 85% PASSING A 0.75" SCREEN.
- THE ORGANIC PORTION NEEDS TO BE FIBROUS AND ELONGATED
- LARGE PORTIONS OF SILTS, CLAYS OR FINE SANDS ARE NOT ACCEPTABLE IN THE MIX
- SOLUBLE SALTS CONTENT SHALL BE <4.0 mmhos/cm
- THE pH SHOULD FALL BETWEEN 5.0 AND 8.0

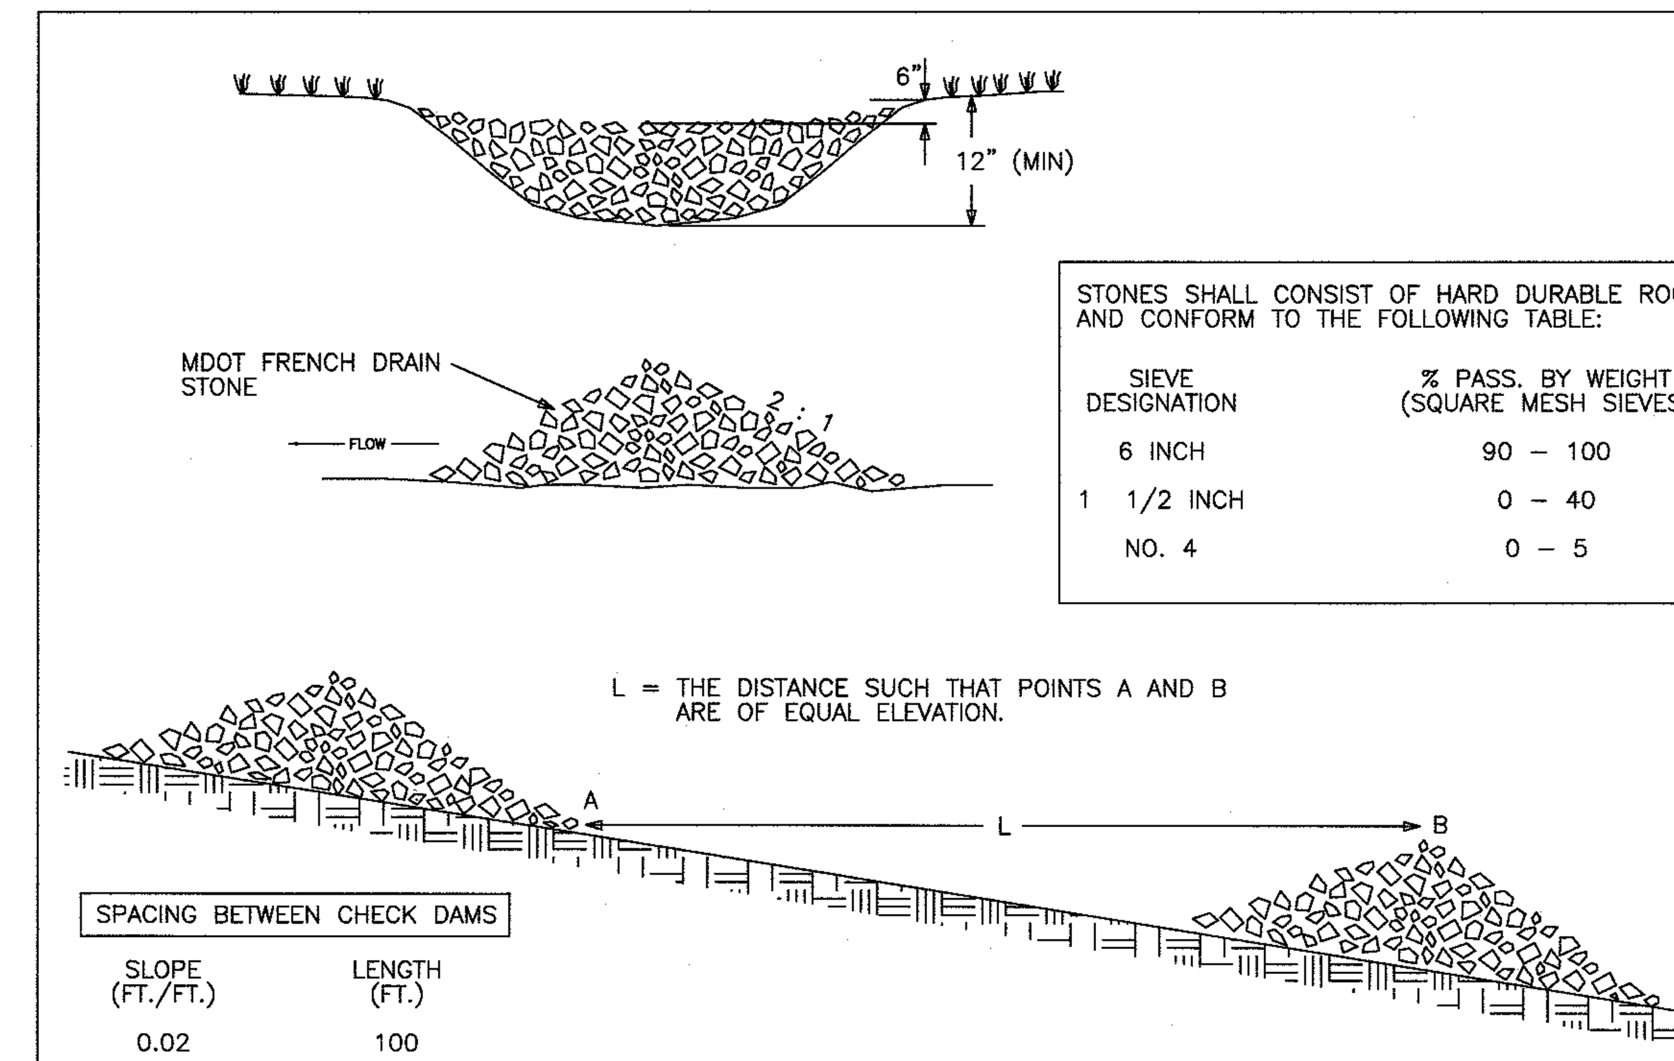
EROSION CONTROL MIX BERM (NTS)



NOTES:

1. PLACE BALES IN A SINGLE ROW, LENGTHWISE ON THE CONTOUR.
2. PLACE BALES 10' AWAY FROM THE TOE OF SLOPE.
3. IN SLOPING AREAS WHERE SURFACE FLOW FOLLOWS THE BALE LINE, INSTALL PERPENDICULAR BALE CHECKS AT APPROPRIATE INTERVALS (100' MAX.)

HAY BALE BARRIER (NTS)



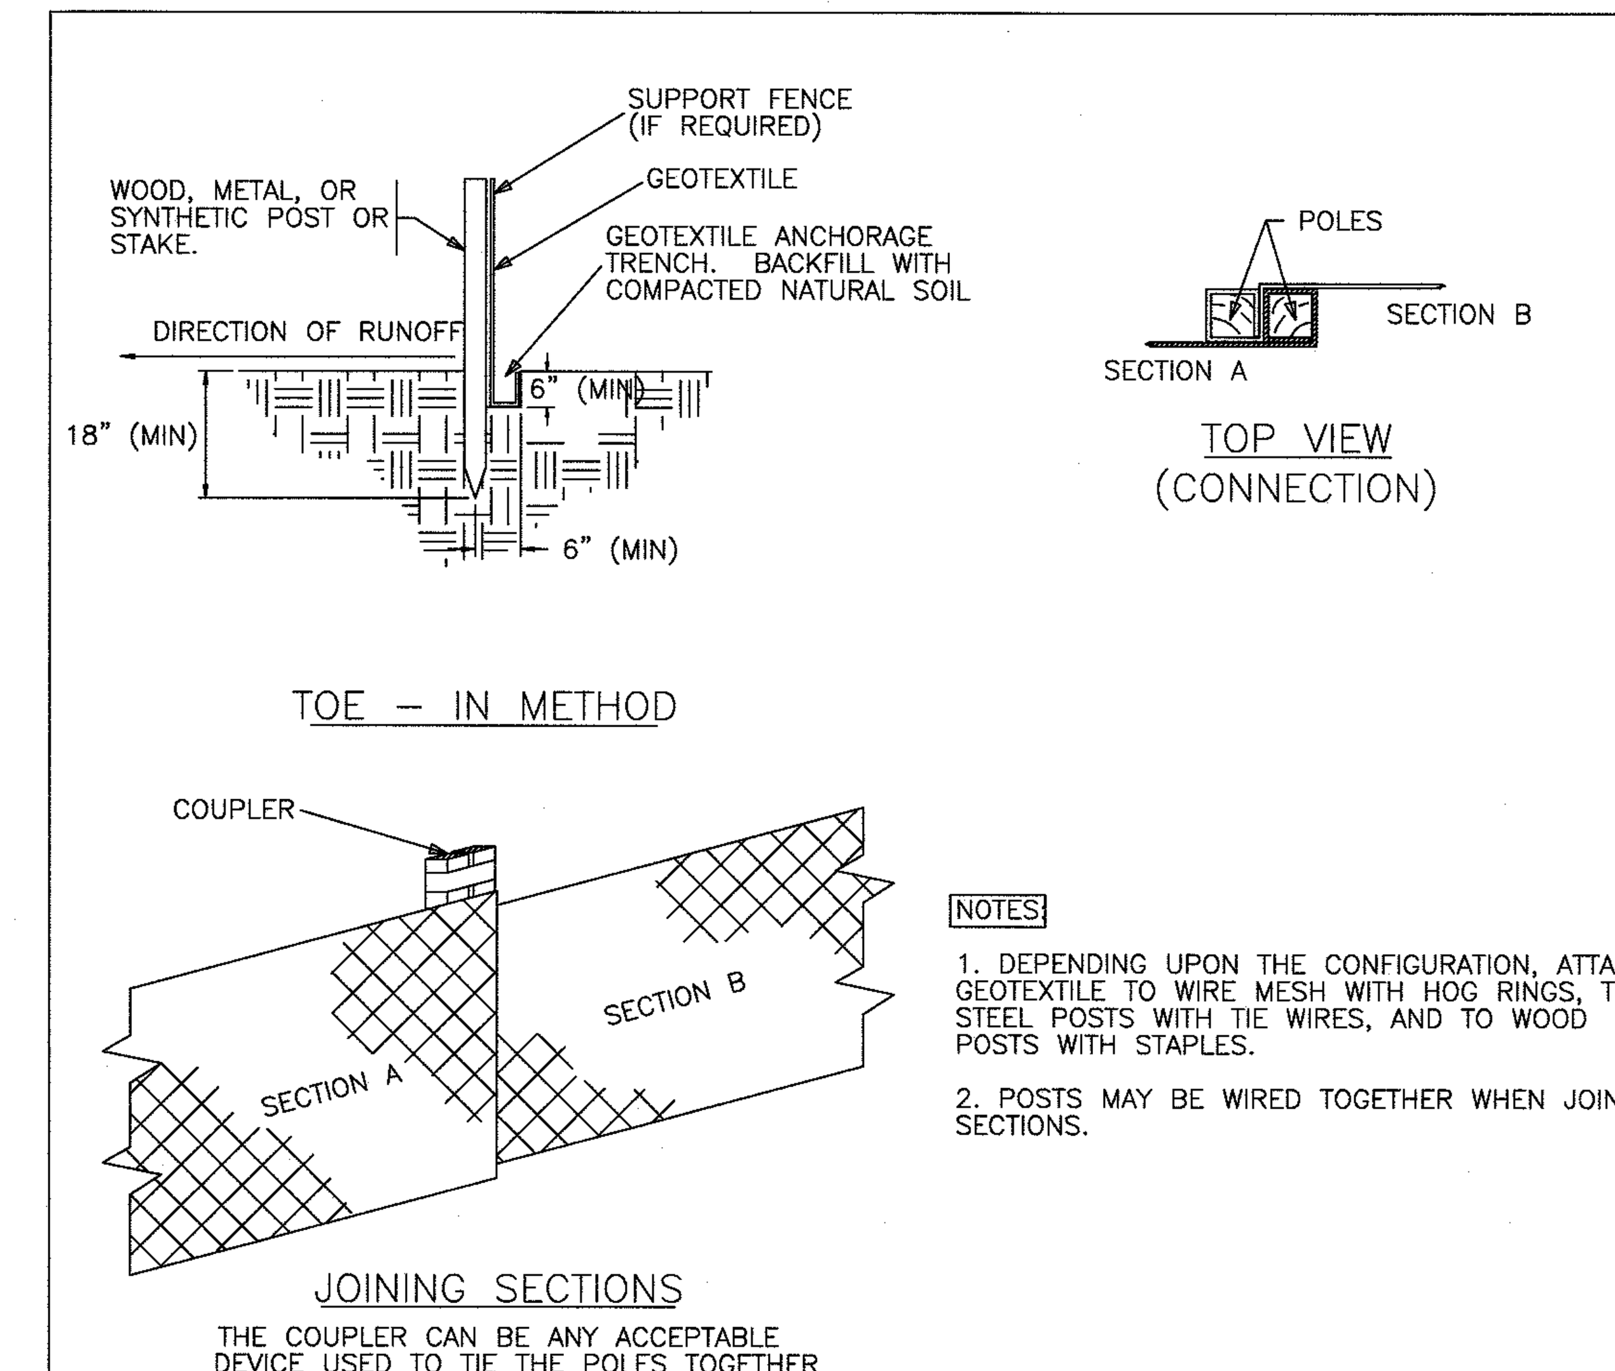
STONES SHALL CONSIST OF HARD DURABLE ROCK AND CONFORM TO THE FOLLOWING TABLE:

SIEVE DESIGNATION	% PASS. BY WEIGHT (SQUARE MESH SIEVES)
6 INCH	90 – 100
1 1/2 INCH	0 – 40
NO. 4	0 – 5

SPACING BETWEEN CHECK DAMS

SLOPE (FT./FT.)	LENGTH (FT.)
0.02	100
0.03	66
0.04	50
0.05	40
0.08	25
0.10	20
0.12	17
0.15	13

STONE CHECK DAM (NTS)



NOTES:

1. DEPENDING UPON THE CONFIGURATION, ATTACH GEOTEXTILE TO WIRE MESH WITH HOG RINGS, TO STEEL POSTS WITH TIE WIRES, AND TO WOOD POSTS WITH STAPLES.
2. POSTS MAY BE WIRED TOGETHER WHEN JOINING SECTIONS.

TEMPORARY SILT FENCE – NTS

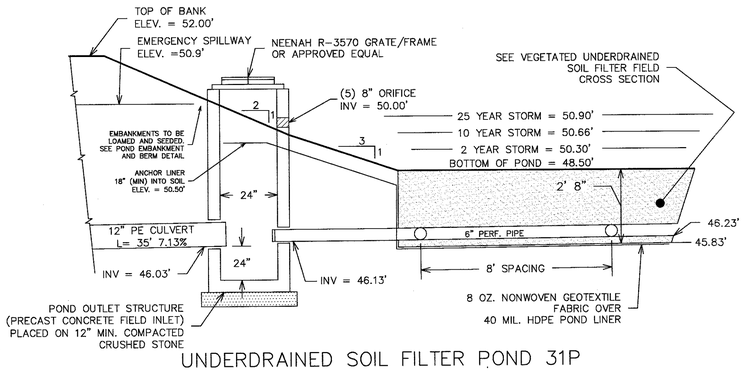
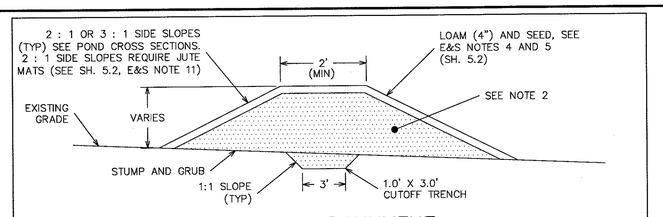
UNDERDRAINED SOIL FILTER POND 40P



UNDERDRAINED SOIL FILTER POND 31P



POND EMBANKMENT
AND BERM DETAIL
SCALE: 1" = 5'

EMBANKMENT CONSTRUCTION NOTES

1. ALL ORGANIC MATERIAL, STUMPS, ROCKS AND BOULDERS SHALL BE REMOVED TO A MINIMUM DEPTH OF 24" BELOW SUBGRADE OF THE BASIN EMBANKMENT. ALL EXCAVATIONS BELOW THE BASIN EMBANKMENT SHALL HAVE A MINIMUM SLOPE OF 1H : 1V.

2. ALL BASIN EMBANKMENT FILL MATERIAL SHALL BE WELL GRADED BORROW WITH A MINIMUM OF 20% FINES CONTENT. EMBANKMENT FILL SHALL BE PLACED IN 12" (MAX.) LIFTS AND BE COMPACTED TO 95% MODIFIED PROCTOR. A CUTOFF TRENCH SHALL BE EXCAVATED AS SHOWN PRIOR TO CONSTRUCTION OF EMBANKMENT.

3. DETENTION BASIN AND ALL EXCAVATIONS SHALL BE KEPT FREE OF WATER DURING CONSTRUCTION.

(APPLIES TO ALL USF PONDS)
(NTS)

SOIL FILTER MEDIA NOTE:

THE SOIL FILTER MEDIA SHALL CONSIST OF A SILTY SAND OR SOIL MIXTURE COMBINED WITH 20% – 25% FINE SHREDDED BARK OR WOOD FIBER MULCH. THE MIXTURE MUST HAVE NO LESS THAN 8% PASSING THE 200 SIEVE, AND A CLAY CONTENT OF LESS THAN 2%. PRIOR TO CONSTRUCTION, THE CONTRACTOR MUST CHECK WITH THE MAINE DEPARTMENT OF ENVIRONMENTAL PROTECTION FOR UPDATED SOIL FILTER MEDIA SPECIFICATIONS.

CONSTRUCTION OVERSIGHT REQUIRED:

INSPECTION OF THE FILTER BASIN SHALL BE PROVIDED FOR EACH PHASE OF CONSTRUCTION BY THE DESIGN ENGINEER WITH REQUIRED REPORTING TO THE DEP. AT A MINIMUM, INSPECTIONS WILL OCCUR:

- AFTER PRELIMINARY CONSTRUCTION OF THE FILTER GRADES AND ONCE THE UNDERDRAIN PIPES ARE INSTALLED BUT NOT BACKFILLED;
- AFTER THE DRAINAGE LAYER IS CONSTRUCTED AND PRIOR TO THE INSTALLATION OF THE FILTER MEDIA;
- AFTER THE FILTER MEDIA HAS BEEN INSTALLED AND SEEDED;
- AFTER ONE YEAR TO INSPECT HEALTH OF THE VEGETATION AND MAKE CORRECTIONS; AND
- ALL MATERIAL USED FOR THE CONSTRUCTION OF THE FILTER BASIN WILL BE APPROVED BY THE DESIGN ENGINEER AFTER TESTS BY A CERTIFIED LABORATORY SHOW THAT THEY ARE PASSING DEP SPECIFICATIONS.
- CONTRACTOR SHALL COORDINATE INSPECTION SCHEDULE WITH INSPECTING ENGINEER PRIOR TO CONSTRUCTION.

NOTES:

1. The boundaries as delineated are the opinion of this surveyor and are based on record information and physical evidence. This plan does not purport title or ownership.

2. Field measurements for this survey were made using a Leica total station with electronic data collection. The relative precision of the unadjusted control traverse is better than 1 in 15,000.

3. The existence or non-existence, depth, size and location of underground utility lines, tanks, and structures was not verified by this survey. Any locations and sizes shown are approximate. Exact location should be further investigated before any excavation takes place on this lot.

4. Property is subject to pole easements; Y.C.R.D. Book 1424, pg. 267.

REFERENCE PLANS:

1. Plot Plan of Land of Kittery Convalescent Center; by Moulton Engineering Co.; dated March 17, 1976. Recorded at the Y.C.R.D. in Plan Book 80, page 1.

LANDSCAPING NOTES

1) THE CONTRACTOR SHAL FOLLOW BEST MANAGEMENT PRACTICES DURING CONSTRUCTION AND SHALL TAKE ALL MEANS NECESSARY TO STABILIZE AND PROTECT THE SITE FROM EROSION.
2) EROSION CONTROL SHALL BE IN PLACE PRIOR TO CONSTRUCTION.
3) EROSION CONTROL TO CONSIST OF HAY BALES AND EROSION CONTROL FABRIC SHALL BE STAKED IN PLACE BETWEEN THE WORK AND WATER BODIES, WETLANDS AND/OR DRAINAGE WAYS PRIOR TO ANY CONSTRUCTION.
4) THE CONTRACTOR SHALL VERIFY LAYOUT AND GRADES AND INFORM THE LANDSCAPE ARCHITECT OR CLIENT'S REPRESENTATIVE OF ANY DISCREPANCIES OR CHANGES IN LAYOUT AND/OR GRADE RELATIONSHIPS PRIOR TO CONSTRUCTION.
5) THE CONTRACTOR SHALL VERIFY EXACT LOCATION AND ELEVATION OF ALL UTILITIES WITH RESPECTIVE UTILITY OWNERS PRIOR TO CONSTRUCTION. CALL DIGSAFE AT 1-888-344-7233.
6) THE CONTRACTOR SHALL GUARANTEE ALL PLANTS FOR NOT LESS THAN TWO YEARS FROM THE TIME OF ACCEPTANCE.
7) ALL LANDSCAPING SHALL BE PROVIDED WITH EITHER OF THE FOLLOWING:
   7)1) AN UNDERGROUND SPRINKLER SYSTEM
   7)2) AN OUTSIDE HOSE ATTACHMENT WITHIN 150 FEET
8) TREES, GROUND COVER, AND SHRUB BEDS SHALL BE MULCHED TO A DEPTH OF 2" WITH ONE-YEAR-OLD, WELL-COMPOSTED, SHREDDED NATIVE BARK NOT LONGER THAN 4" IN LENGTH AND 1/2" IN WIDTH, FREE OF WOODCHIPS AND SAW DUST. MULCH FOR FERNS AND HERBACEOUS PERENNIALS SHALL BE NO LONGER THAN 1" IN LENGTH. TREES IN LAWN AREAS SHALL BE MULCHED IN A 5' DIAMETER MIN. SAUCER.
9) ALL DISTURBED AREAS WILL BE DRESSED WITH 4" OF TOPSOIL AND PLANTED AS NOTED ON THE PLANS OR SEEDED EXCEPT PLANT BEDS. PLANT BEDS SHALL BE PREPARED TO A DEPTH OF 12" WITH 75% LOAM AND 25% COMPOST.

SPEC/ORDERING INFORMATION

LUMINAIRE

LUMINAIRE	OPTICS	# of LED's	DRIVE CURRENT	COLOR	VOLTAGE	MOUNTING	FINISH	OPTIONS
DSAP1	VLED IES DISTRIBUTION TYPE	DSAP1				ARM MOUNT	STANDARD TEXTURED FINISH	
DSAP25	VLED - II (Type II)	80LED[1]	700mA	NW (4000K) *STANDARD	120	XPD	BLACK RAL-9005-T	HOUSE SIDE SHIELDED REFLECTOR PDSM45 ..... HS-VLED
	VLED - III (Type III)	64LED[1]	525mA	CW (5000K)	208	XPK	WHITE RAL-9003-T	PHOTO CELL + VOLTAGE (EXAMPLE: PC120V) ..... PC+V
	VLED - IV (Type IV)	48LED	350mA	WW (3000K)	240	1	GREY RAL-7004-T	TWIST LOCK PHOTO CELL+VOLTAGE (EXAMPLE TPC120V) ..... TPC+V
	VLED - VSQ (Type VSQ)	DSAP25		OTHER LED COLORS AVAILABLE CONSULT FACTORY	277	WALLMOUNT	DARK BRONZE RAL-80197	TWIST LOCK RECEPTACLE ONLY ..... TPR
		120LED[1]			347	WM	GREEN RAL-6005-T	SINGLE FUSE (120V., 277V.) ..... SF
		100LED[1]			480		FOR SMOOTH FINISH REPLACE SUFFIX "T" WITH SUFFIX "S" (EXAMPLE: RAL-9500-S)	DOUBLE FUSE (208V., 240V.) ..... DF
		80LED						
		64LED						

[1] NOTE: 1=NOT AVAILABLE IN 700mA
